

Admin guide

For super admins, platform admins and every workspace PMO/Admin: a step-by-step walk through every page of the platform and every tab on it, the same as the guided tour in the app.

MoonSlate Consulting · 8 October 2026 · for the SIT release
Screenshots use test data and fictional client names.

Using UNYFi as an admin

UNYFi is where MoonSlate runs its client engagements: each client has a **workspace** with its projects, people and apps, and MoonSlate's own tools sit alongside under **MoonSlate apps**. This guide follows the guided tour in the app, page by page and tab by tab, with a screenshot of each step.

The same tour is in the app. It starts by itself the first time an admin signs in, and you can start it again at any time from the ? button at the top right: take the whole tour, tour just the page you're on, or open this guide.

Who sees what

What you see follows your role, and the server checks every action. The tour shows each person only the pages and tabs they can open. This guide follows a super admin's tour, so some steps may not apply to you.

	Super admin	Platform admin	MoonSlate PMO/Admin	Client PMO/Admin
Client engagements	All	Those they set up	Their workspaces	Lands in their own workspace
Running a workspace: projects, members, roles, apps, access, settings	All	Those they set up	Their workspaces	Their own workspace
MoonSlate apps, AI Workspace, Dash	Yes	Yes	Yes	No
Admins & PMO	Yes	No	No	No
App catalogue	Yes	If given the right	No	No
App availability	All workspaces	If given the right	Their workspaces	Uses Workspace > Apps
Governance: audit log, AI governance	Everything	If given the right	Their workspaces	No
Notifications and app credentials	Yes	If given the right	No	No

Contents

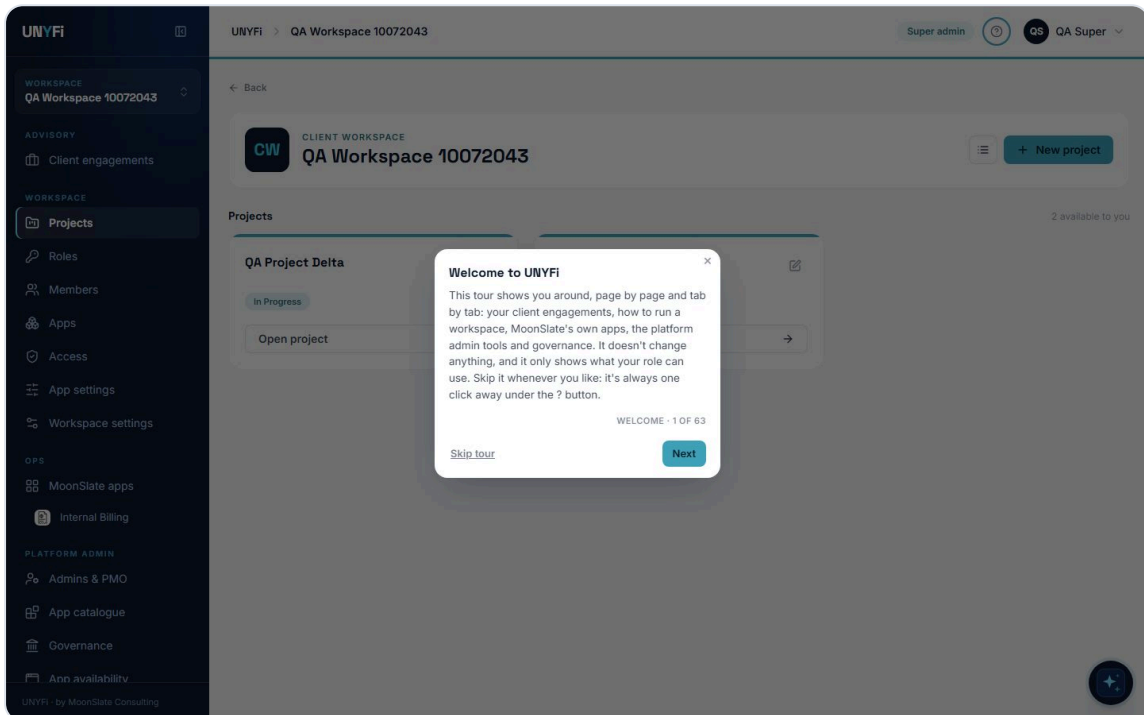

1. Welcome	7 steps	6. Governance	8 steps
2. Client engagements	4 steps	7. All set	1 step
3. Inside a workspace	24 steps	8. Quick how-tos	
4. MoonSlate apps	6 steps	9. If something isn't working	
5. Platform admin	13 steps		

Welcome

The header and the controls that follow you to every page.

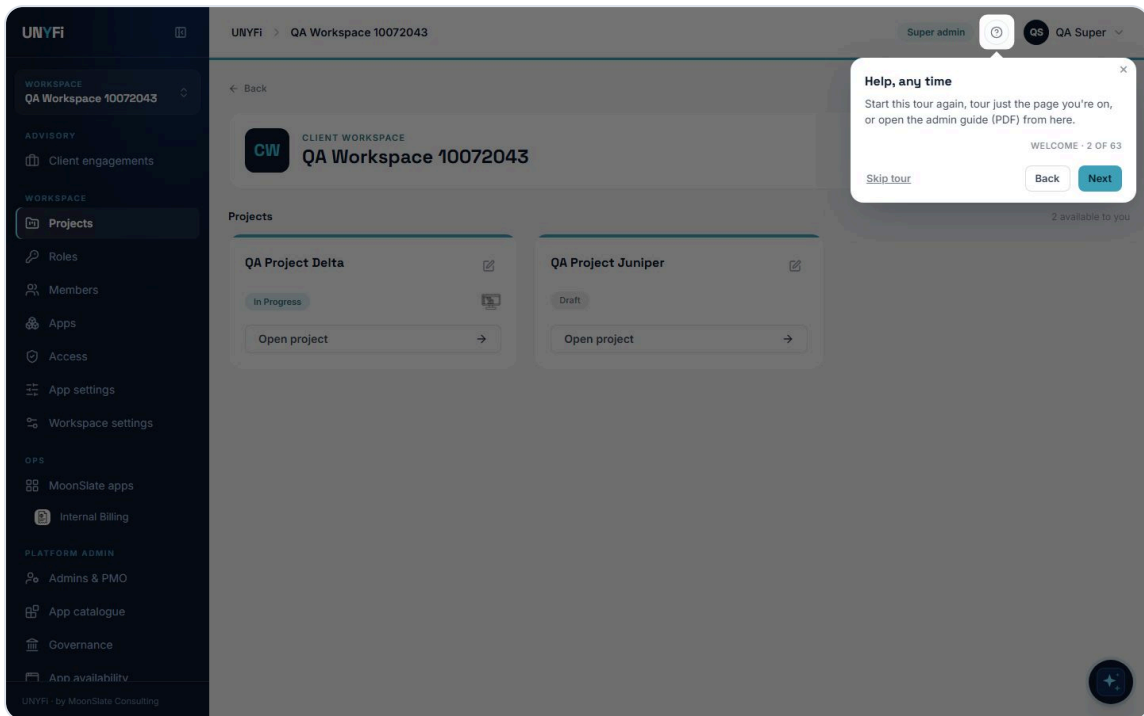

1 Welcome to UNYFi

This tour shows you around, page by page and tab by tab: your client engagements, how to run a workspace, MoonSlate's own apps, the platform admin tools and governance. It doesn't change anything, and it only shows what your role can use. Skip it whenever you like: it's always one click away under the ? button.

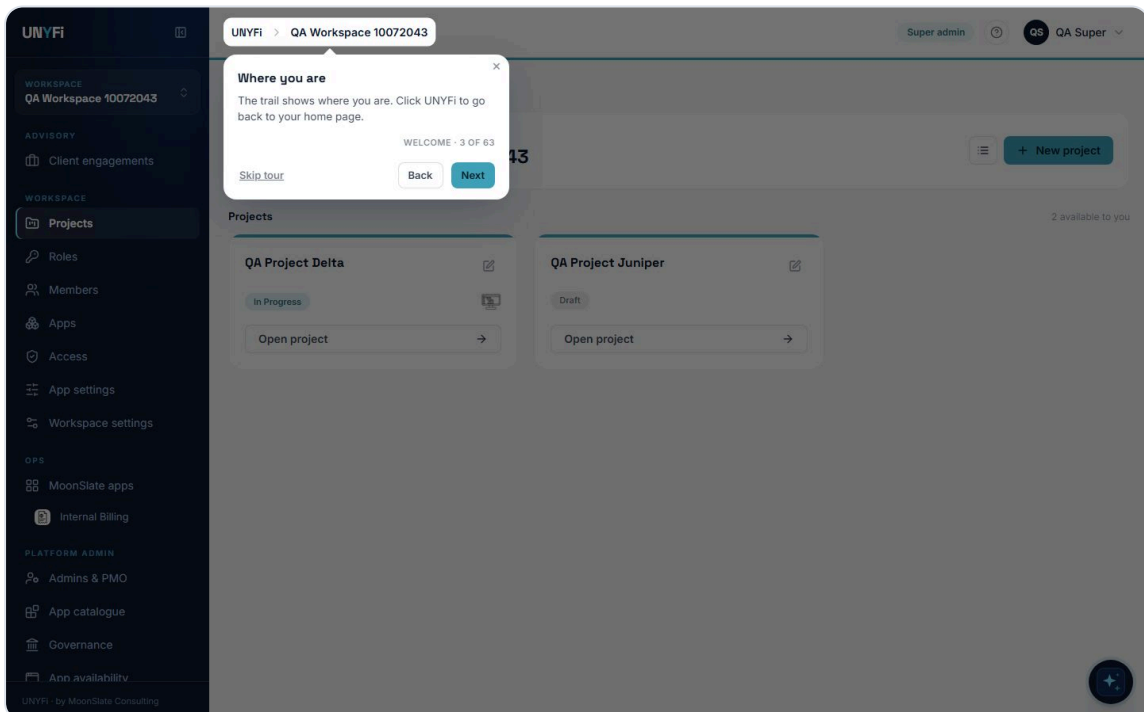

2 Help, any time

Start this tour again, tour just the page you're on, or open the admin guide (PDF) from here.

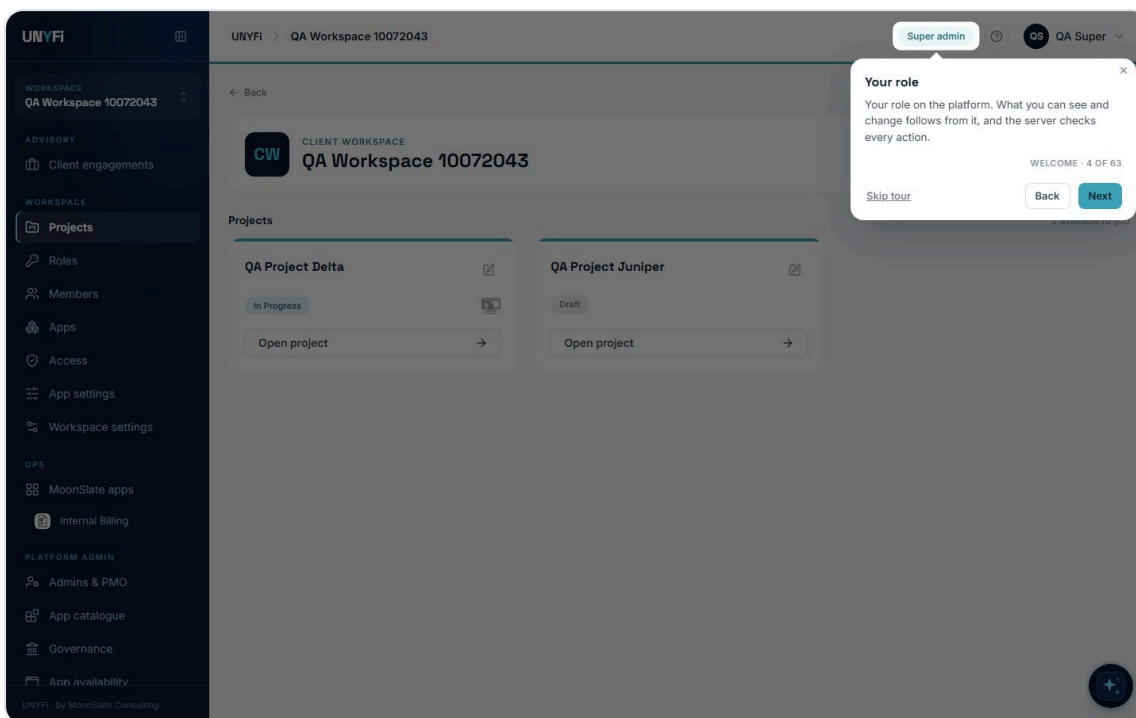

3 Where you are

The trail shows where you are. Click UNYFi to go back to your home page.

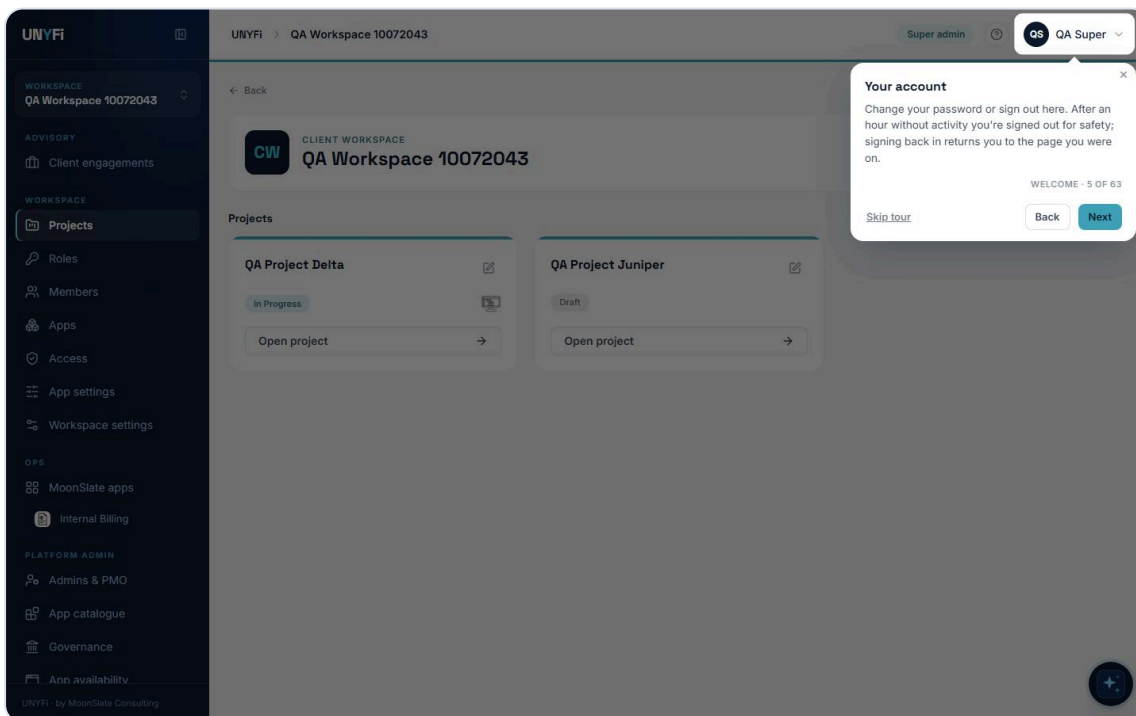

4 Your role

Your role on the platform. What you can see and change follows from it, and the server checks every action.

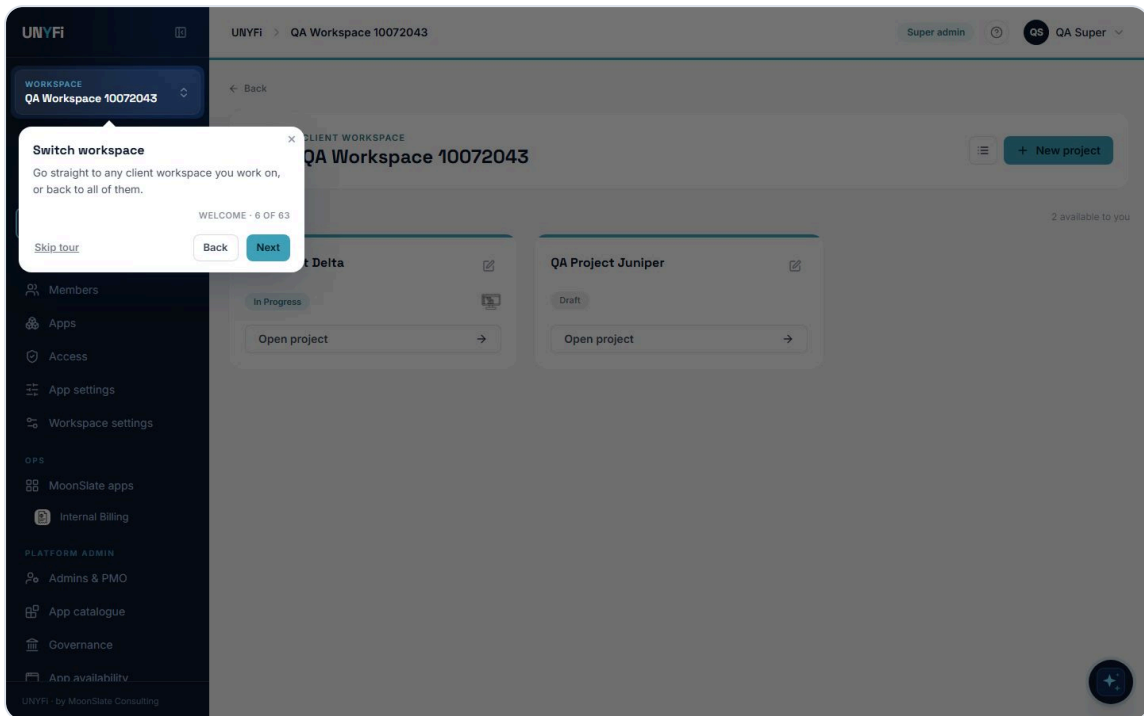

5 Your account

Change your password or sign out here. After an hour without activity you're signed out for safety; signing back in returns you to the page you were on.

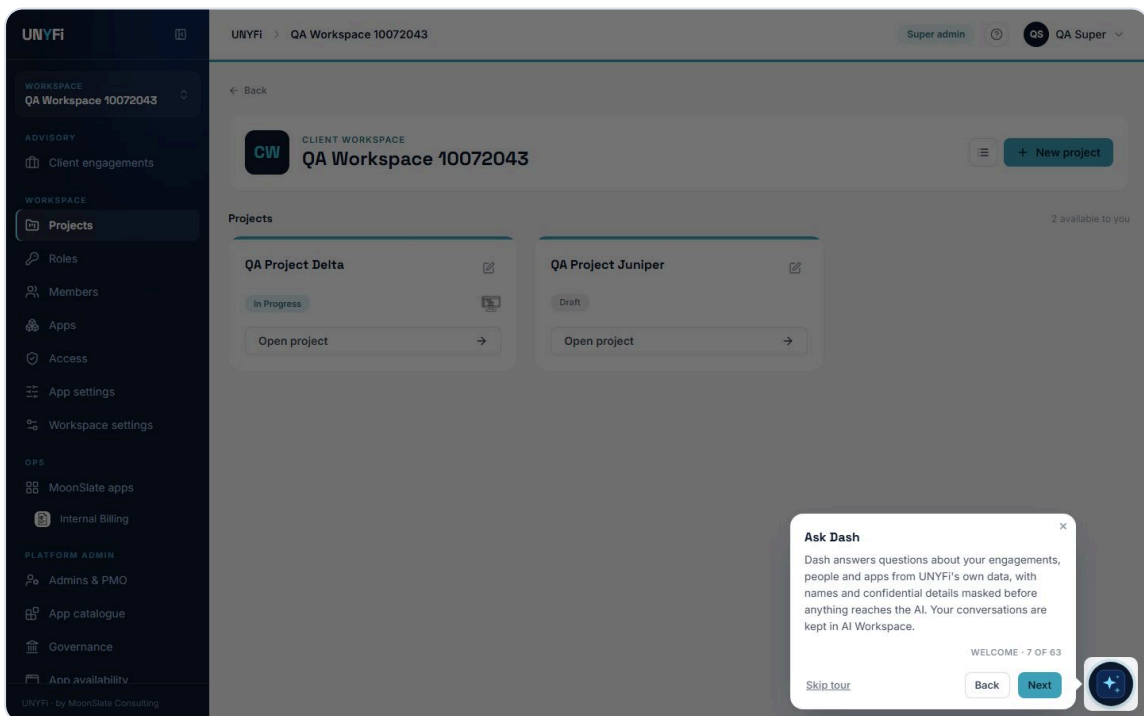

6 Switch workspace

Go straight to any client workspace you work on, or back to all of them.

7 Ask Dash

Dash answers questions about your engagements, people and apps from UNYFi's own data, with names and confidential details masked before anything reaches the AI. Your conversations are kept in AI Workspace.

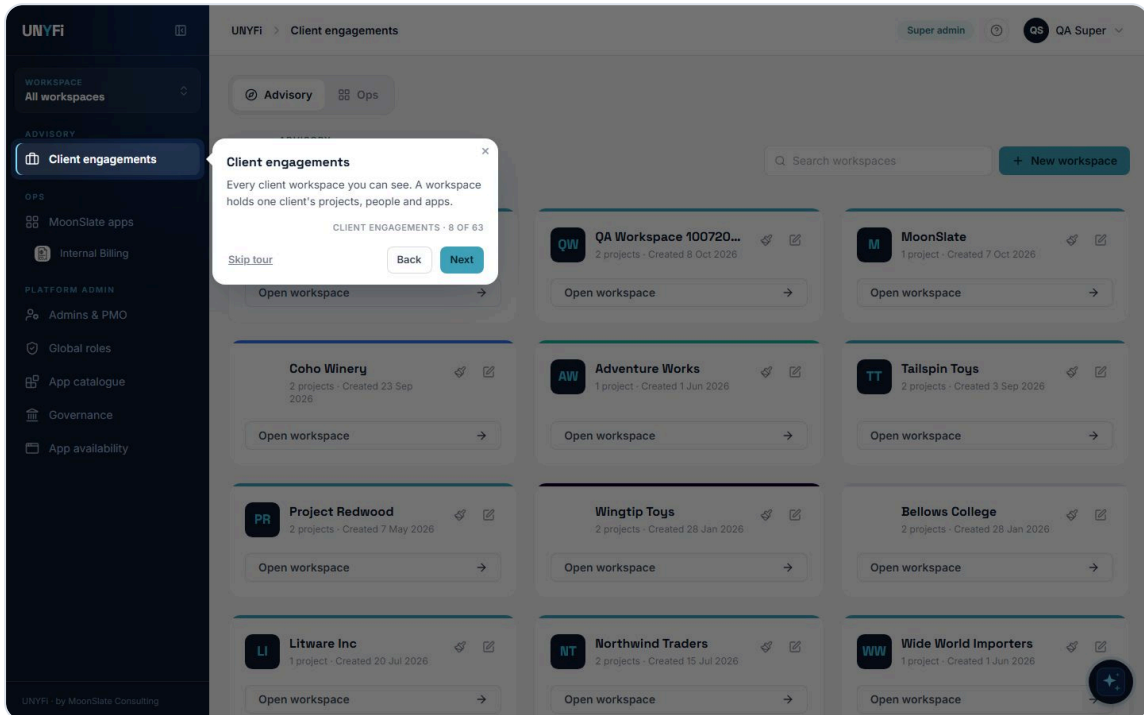

Client engagements

Your home page as MoonSlate staff: every client workspace you can see.

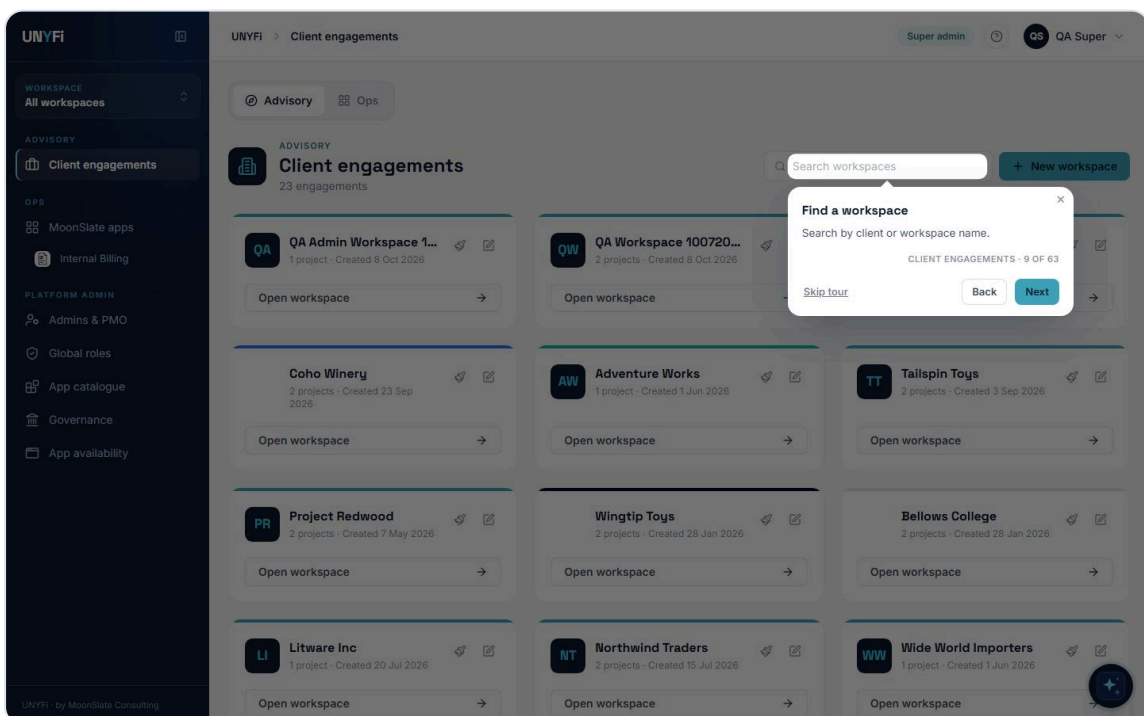

8 Client engagements

Every client workspace you can see. A workspace holds one client's projects, people and apps.

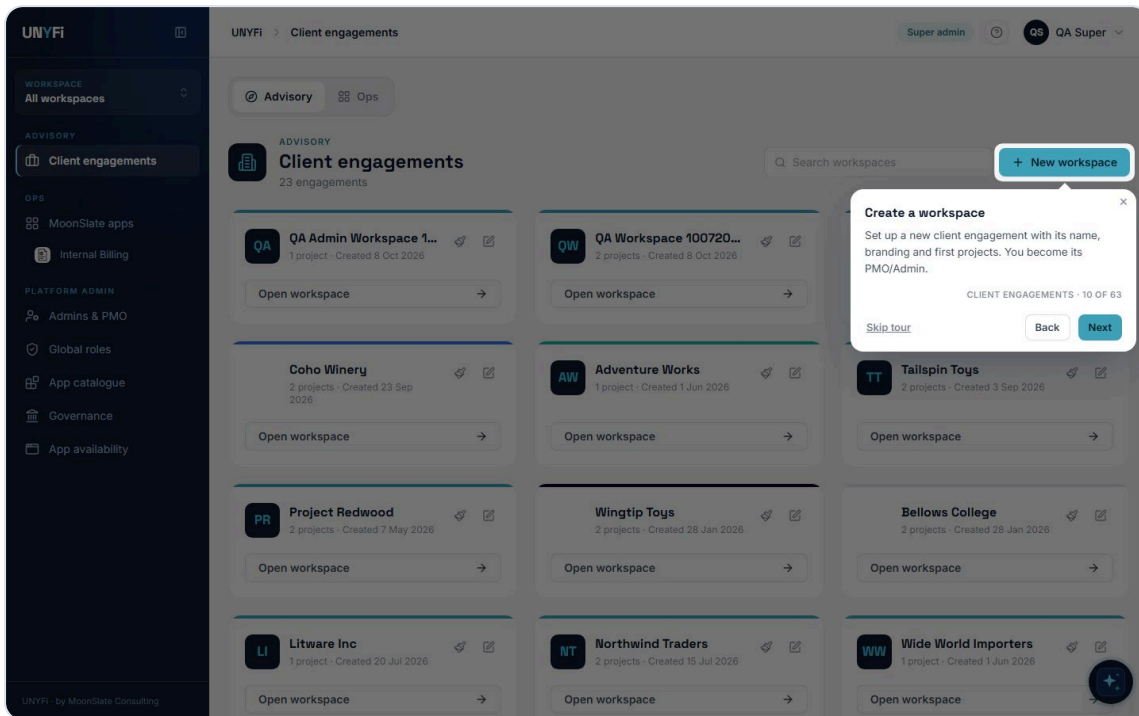

9 Find a workspace

Search by client or workspace name.

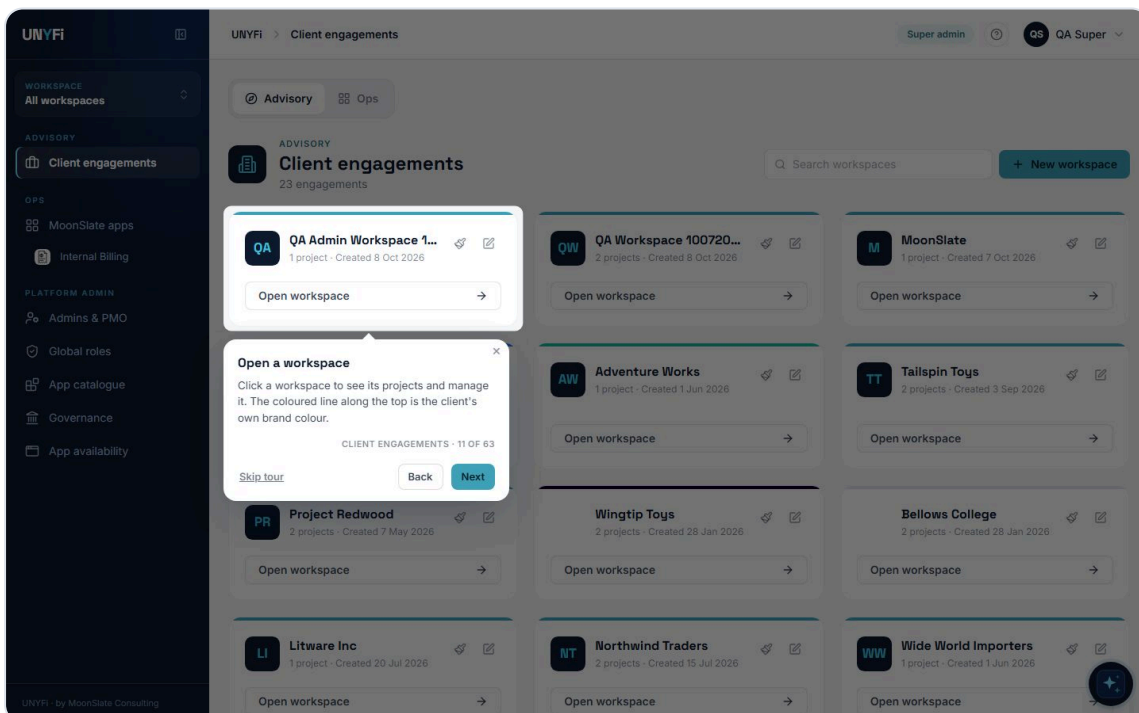

10 Create a workspace

Set up a new client engagement with its name, branding and first projects. You become its PMO/Admin.

11 Open a workspace

Click a workspace to see its projects and manage it. The coloured line along the top is the client's own brand colour.

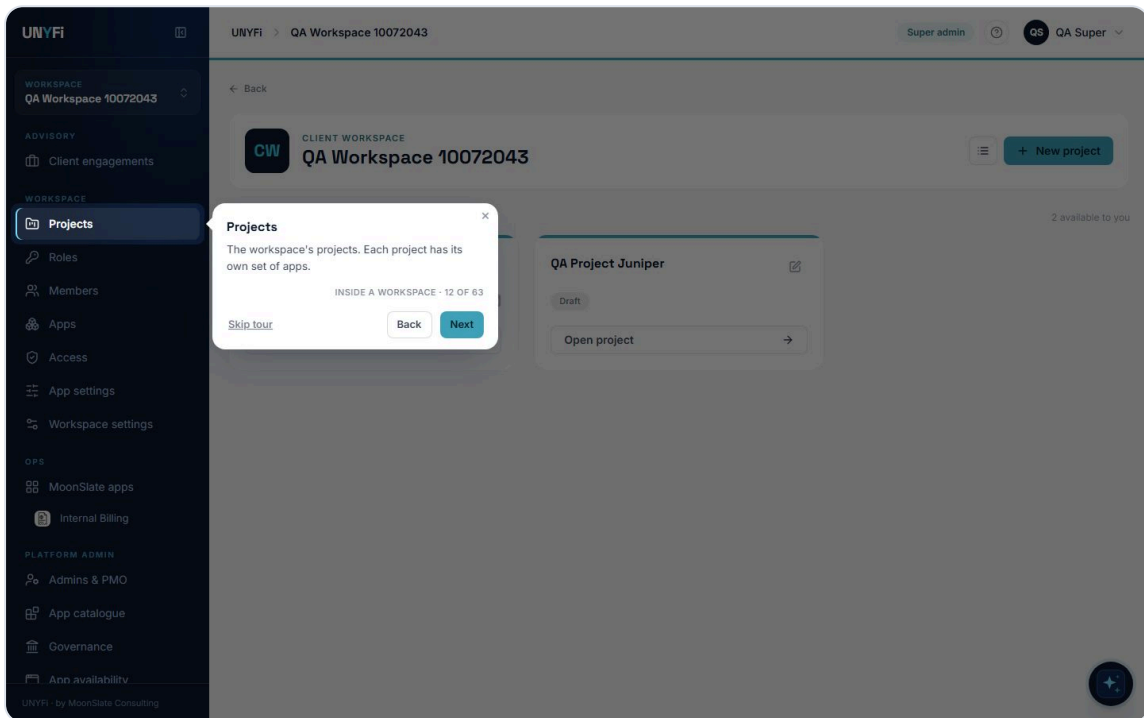

Inside a workspace

Everything about one client: its projects, people, roles, apps, access and settings, with a step for each tab of each page. A client's own PMO/Admin sees exactly this, for their workspace.

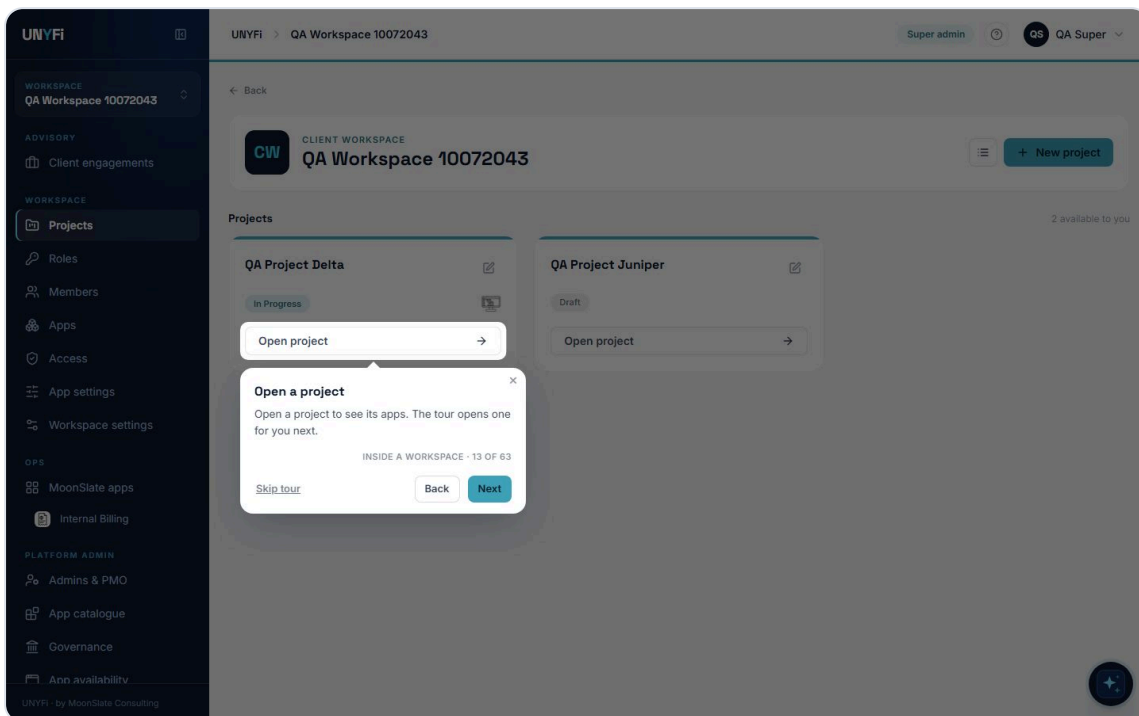

12 Projects

The workspace's projects. Each project has its own set of apps.

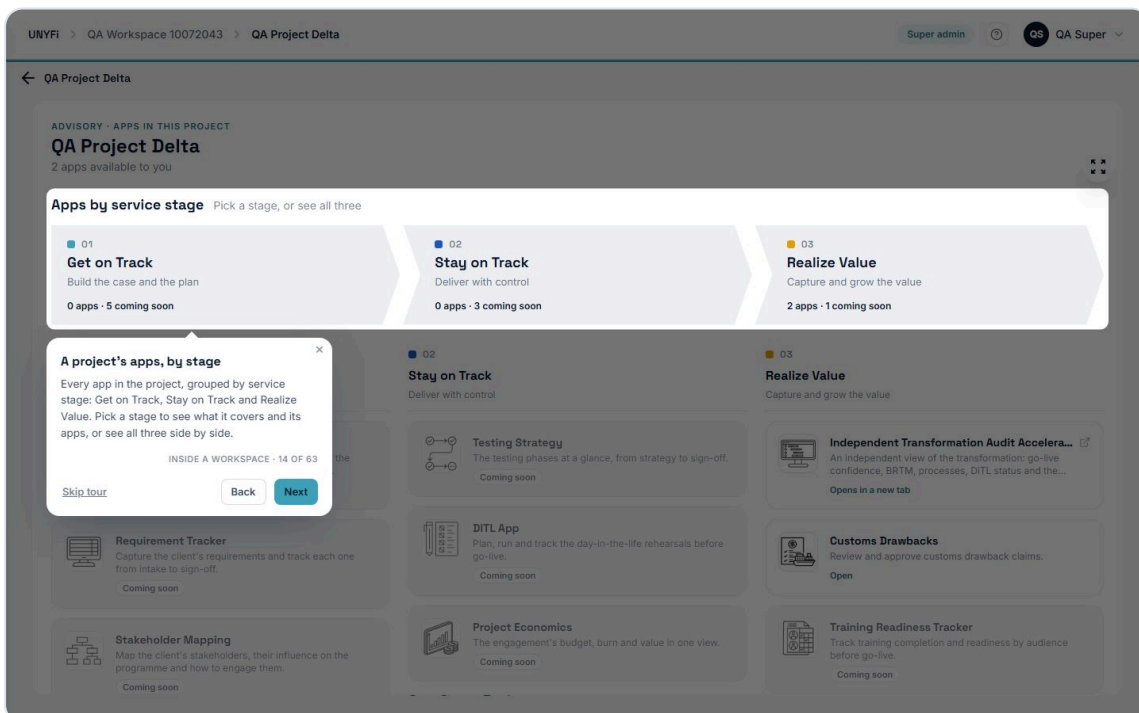

13 Open a project

Open a project to see its apps. The tour opens one for you next.

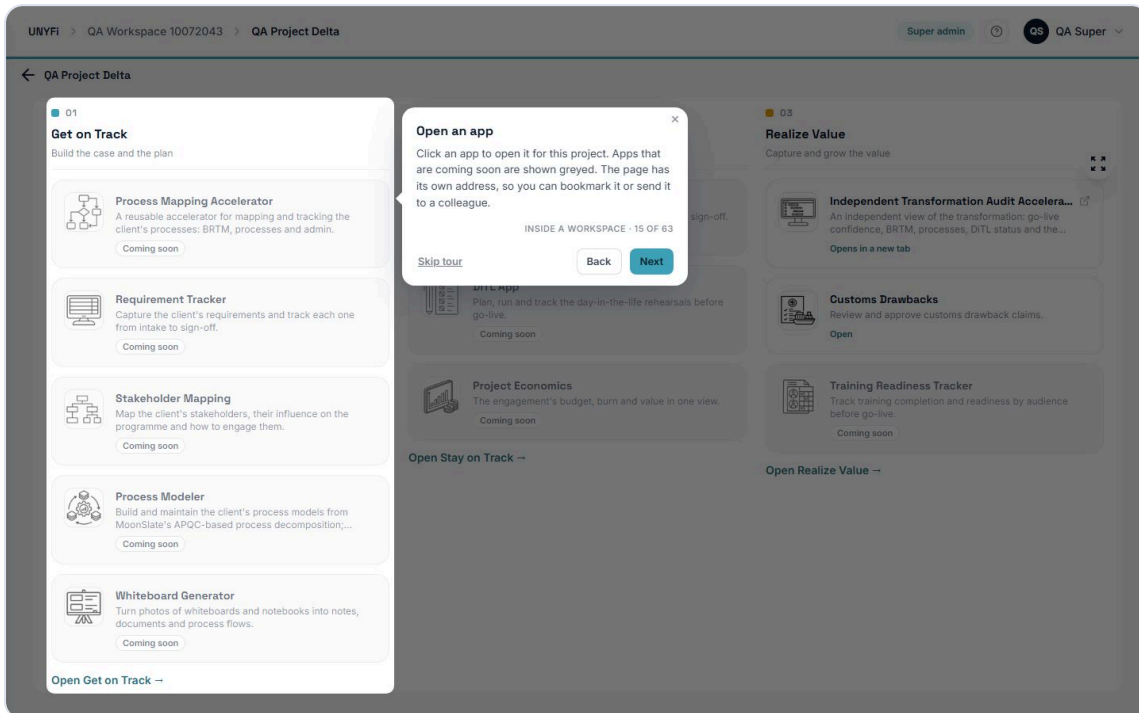

14 A project's apps, by stage

Every app in the project, grouped by service stage: Get on Track, Stay on Track and Realize Value. Pick a stage to see what it covers and its apps, or see all three side by side.

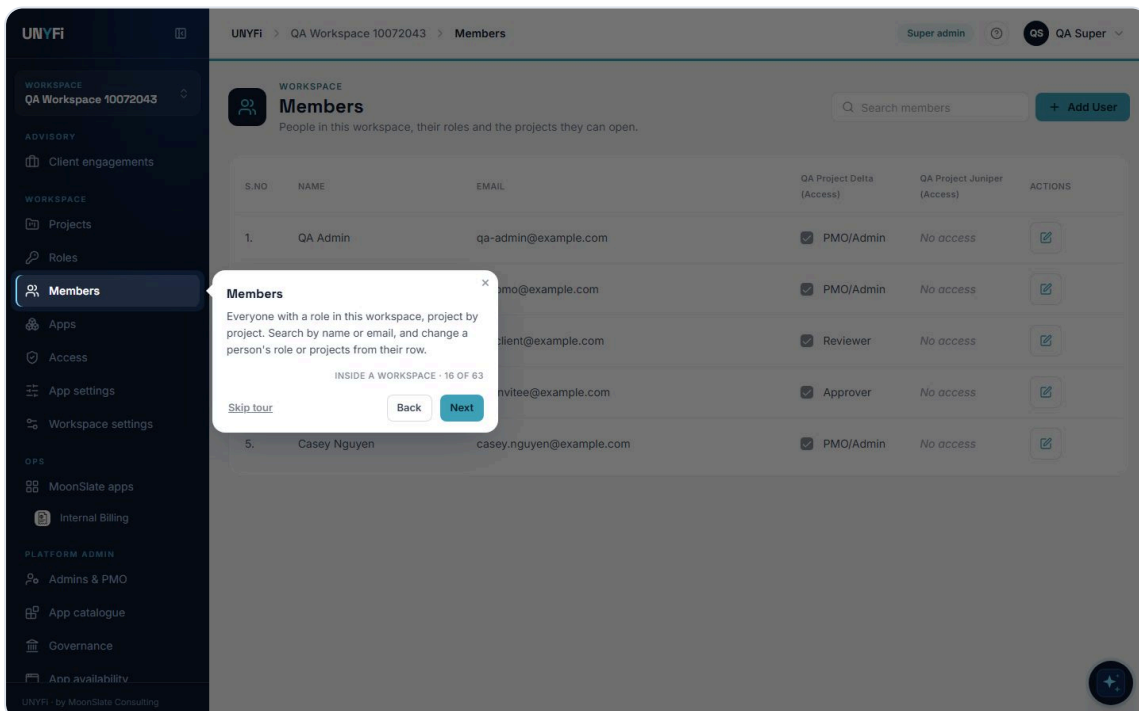

15 Open an app

Click an app to open it for this project. Apps that are coming soon are shown greyed. The page has its own address, so you can bookmark it or send it to a colleague.

16 Members

Everyone with a role in this workspace, project by project. Search by name or email, and change a person's role or projects from their row.

17 Add a person

Give someone a sign-in and a role on a project, as a client or a consultant; they're emailed their sign-in details. A client's PMO/Admin can sign in and look after their own workspace.

The screenshot shows the 'Members' page in the UNYFI workspace. The page title is 'Members' with a subtitle 'People in this workspace, their roles and the projects they can open.' There is a search bar and an '+ Add User' button. A table lists members with columns for S.NO, NAME, EMAIL, and QA Project (Access). A tooltip titled 'Add a person' is visible, explaining the process of adding a person to a project.

S.NO	NAME	EMAIL	QA Project (Access)
1.	QA Admin	qa-admin@example.com	PMO
2.	QA Pmo	qa-pmo@example.com	PMO
3.	QA Client	qa-client@example.com	Reviewer No access
4.	Rchaudhuri -	qa-invitee@example.com	Approver No access
5.	Casey Nguyen	casey.nguyen@example.com	PMO/Admin No access

18 Roles

The roles people can hold here and what each one can read or change in every app. Search them, and change a role's pages and permissions from its row.

The screenshot shows the 'Roles' page in the UNYFI workspace. The page title is 'Roles' with a subtitle 'Roles and what each can read or change in every app.' There is a search bar and an '+ Add Role' button. A table lists roles with columns for S.NO, ROLES NAME, DESCRIPTION, ROLE TYPE, CUSTOMS DRAWBACKS, and UNYFI_COHO. A tooltip titled 'Roles' is visible, explaining the purpose of the roles page.

S.NO	ROLES NAME	DESCRIPTION	ROLE TYPE	CUSTOMS DRAWBACKS	UNYFI_COHO
1.	PMO/Admin	Manages workspace	Consultant	No access	No access
2.	Nguyen (Approver)	Approves	Consultant	No access	Write
3.	Nguyen (Reviewer)	Reviews	Consultant	No access	No access
4.	for a test role	for testing of role creation	Consultant	No access	No access
5.	for testing of role creation	for testing of role creation	Consultant	No access	Write
6.	Client	Client	Client	No access	No access
7.	Approver	Approves	Client	No access	No access
8.	Billing Manager	Manages billing for the workspace	Client	No access	No access

19 Add a role

Create a role for this workspace only, and choose what it can open and change.

The screenshot shows the UNYFi Roles management interface. The left sidebar contains navigation links for Workspace, Advisory, Workspace, Roles, Members, Apps, Access, App settings, Workspace settings, OPS, MoonSlate apps, Internal Billing, Platform Admin, Admins & PMO, App catalogue, Governance, and App availability. The main content area is titled 'Roles' and includes a search bar and an 'Add Role' button. A table lists existing roles with columns for S.NO, Roles Name, Description, Role Type, and access permissions. An 'Add a role' modal is open, displaying instructions to create a role for the workspace and choose its permissions. The modal includes a 'Skip tour' button and 'Back'/'Next' navigation buttons.

S.NO	ROLES NAME	DESCRIPTION	ROLE TYPE
1.	PMO/Admin	Manages workspace	Consultant
2.	Casey Nguyen (Approver)	Casey Nguyen (Approver)	Consultant
3.	Casey Nguyen (Reviewer)	Casey Nguyen (Reviewer)	Consultant
4.	Sample role	This is for a test role	Consultant
5.	Sample role of Coho	This is for testing of role creation	Consultant
6.	Reviewer	Reviews	Client
7.	Approver	Approves	Client
8.	Billing Manager	Manages billing for the workspace	Client

20 Apps

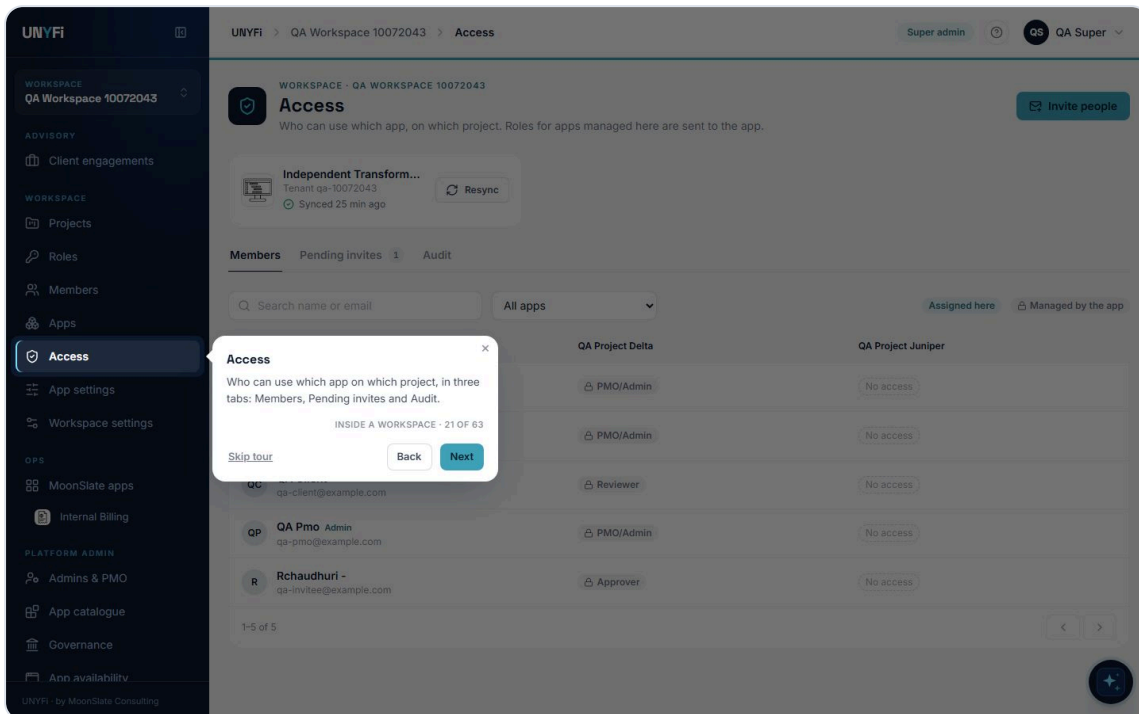

Switch apps on or off for this client, then choose which projects show them. An app with its own tenant, such as ITAA, asks for the tenant first. Apps that are coming soon are listed separately and can't be switched on yet.

The screenshot shows the UNYFi Apps management interface. The left sidebar contains navigation links for Workspace, Advisory, Workspace, Roles, Members, Apps, Access, App settings, Workspace settings, OPS, MoonSlate apps, Internal Billing, Platform Admin, Admins & PMO, App catalogue, Governance, and App availability. The main content area is titled 'Apps' and includes a search bar. A list of apps is shown with toggle switches to enable or disable them. An 'Apps' modal is open, displaying instructions to switch apps on or off for the client and choose which projects show them. The modal includes a 'Skip tour' button and 'Back'/'Next' navigation buttons.

App Name	Status
Business Case Generator	Off
Customs Drawbacks	On
Process Mapping Accelerator	Off
Process Modeler	On
Project Economics	Coming soon
Requirement Tracker	Coming soon

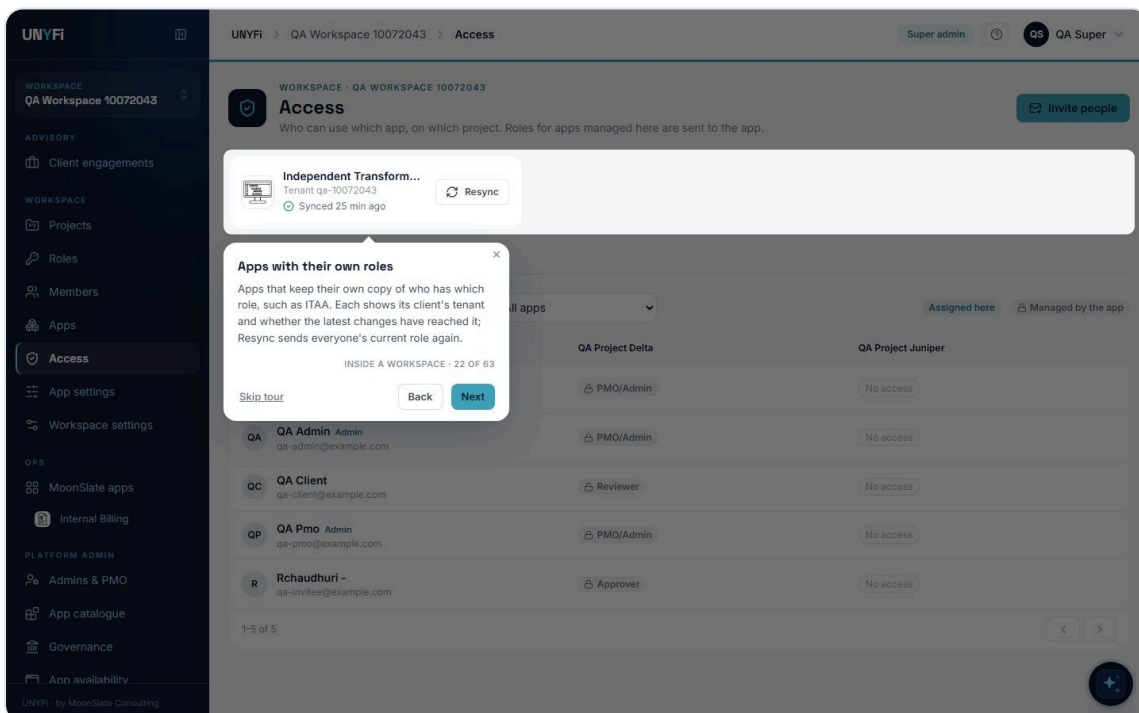

21 Access

Who can use which app on which project, in three tabs: Members, Pending invites and Audit.

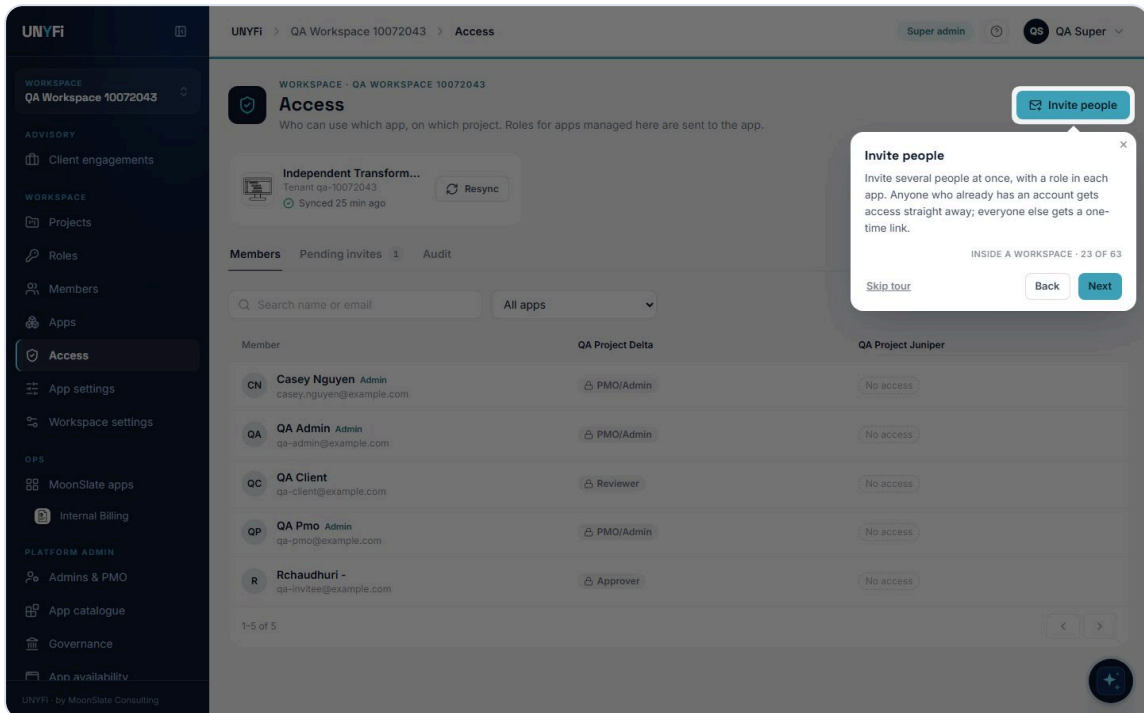

22 Apps with their own roles

Apps that keep their own copy of who has which role, such as ITAA. Each shows its client's tenant and whether the latest changes have reached it; Resync sends everyone's current role again.

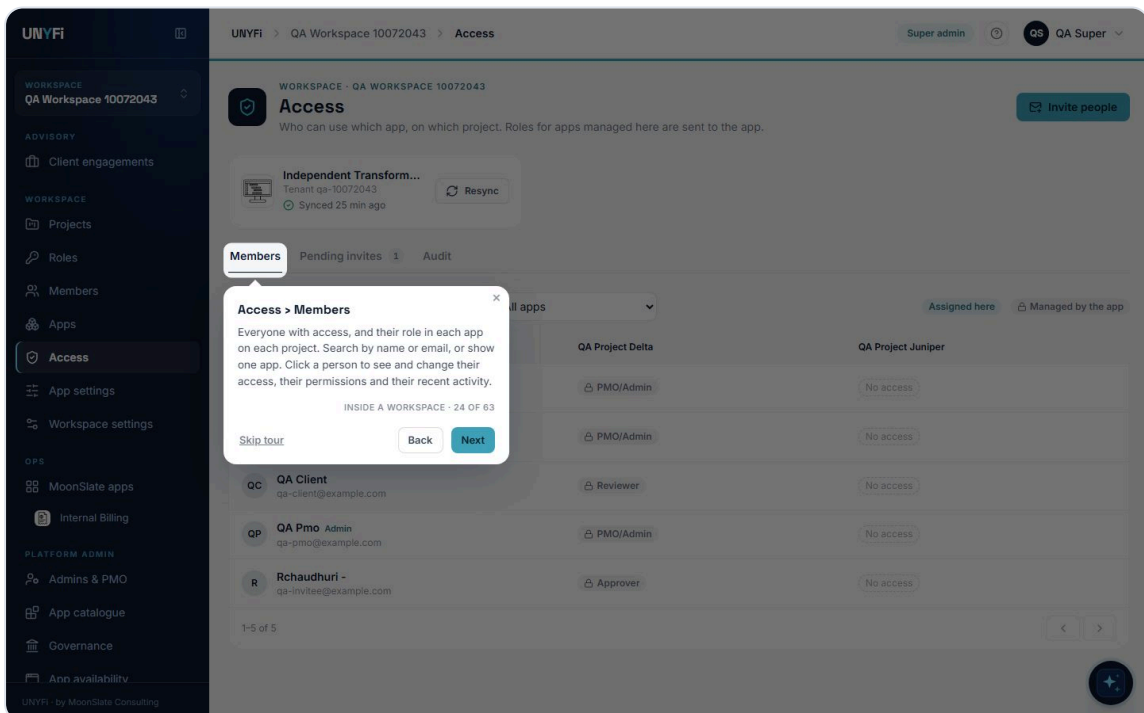

23 Invite people

Invite several people at once, with a role in each app. Anyone who already has an account gets access straight away; everyone else gets a one-time link.

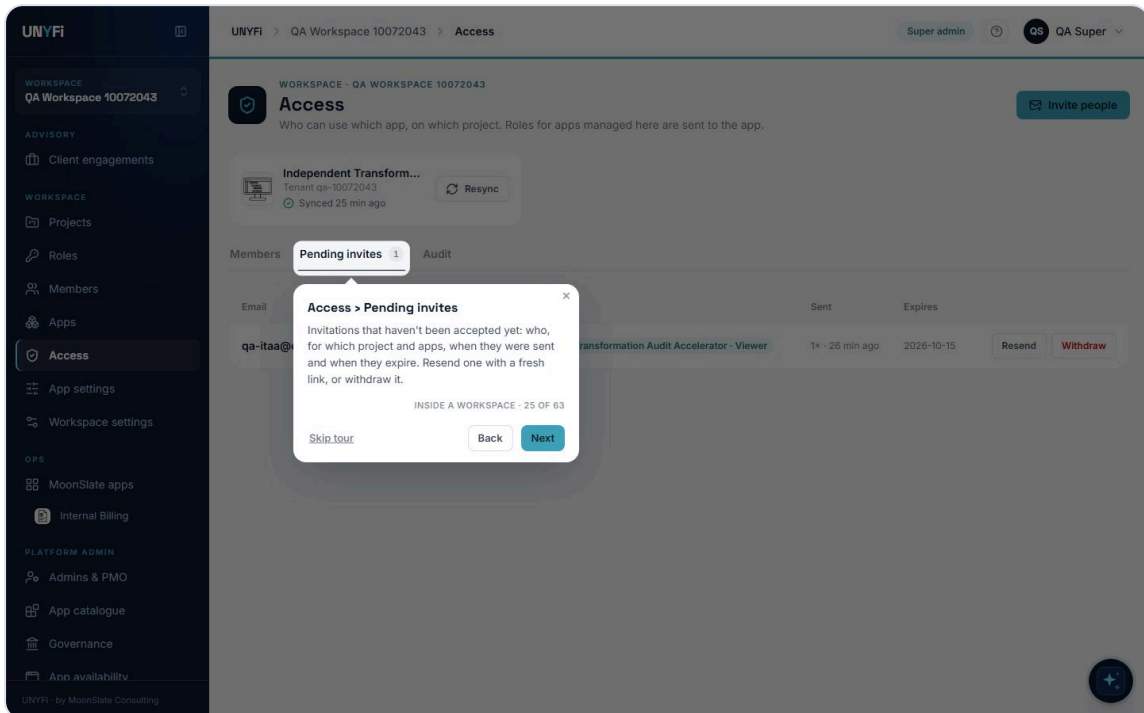

24 Access > Members

Everyone with access, and their role in each app on each project. Search by name or email, or show one app. Click a person to see and change their access, their permissions and their recent activity.

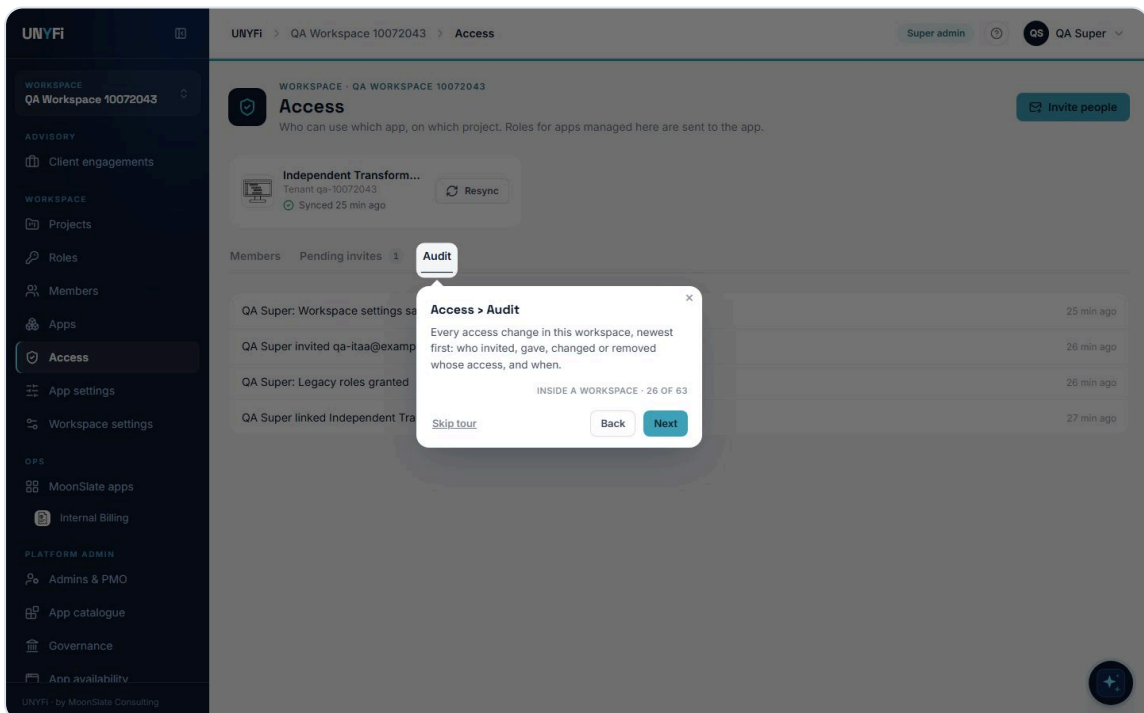

25 Access > Pending invites

Invitations that haven't been accepted yet: who, for which project and apps, when they were sent and when they expire. Resend one with a fresh link, or withdraw it.

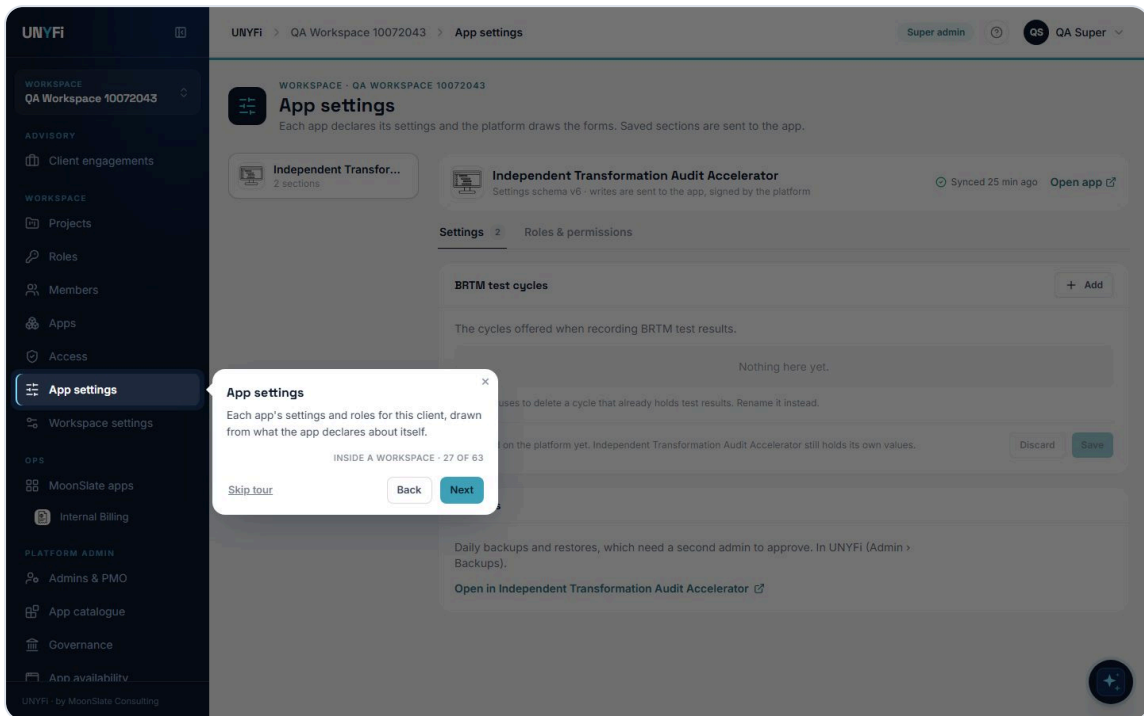

26 Access > Audit

Every access change in this workspace, newest first: who invited, gave, changed or removed whose access, and when.

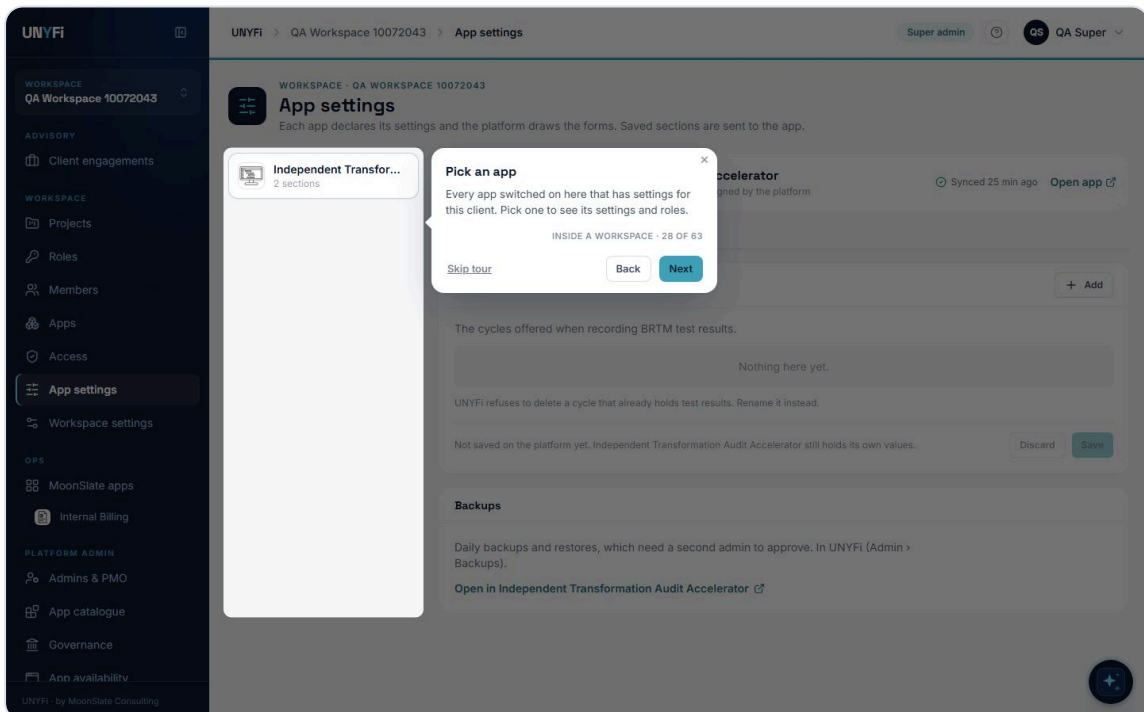

27 App settings

Each app's settings and roles for this client, drawn from what the app declares about itself.

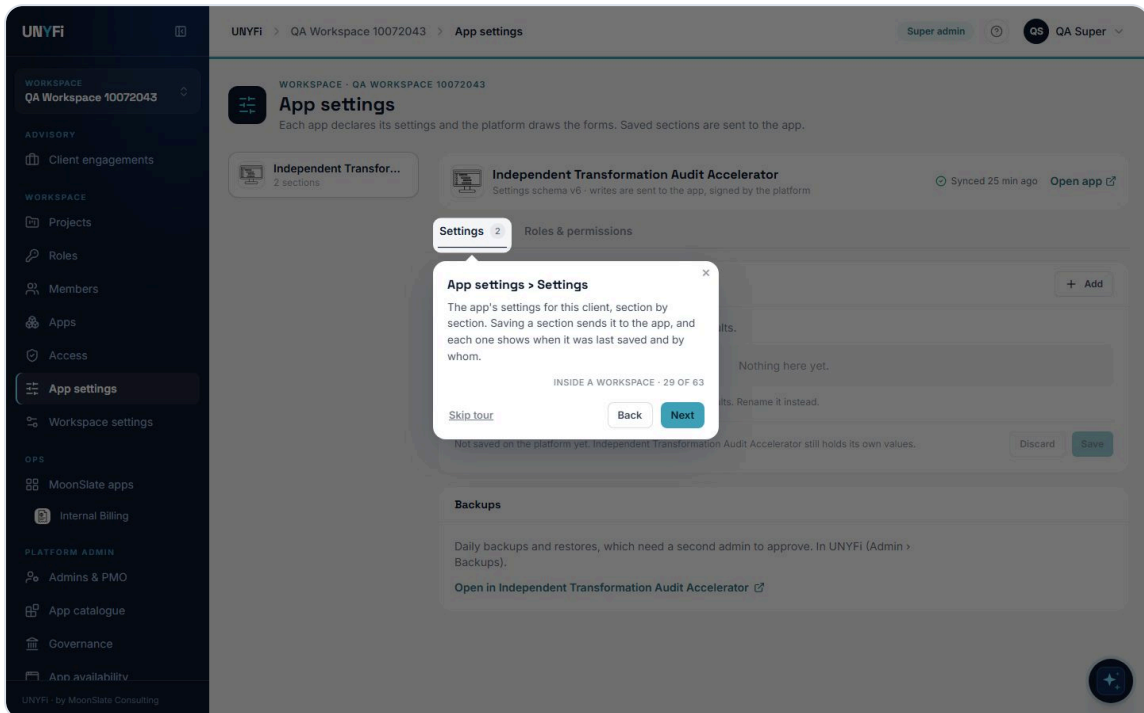

28 Pick an app

Every app switched on here that has settings for this client. Pick one to see its settings and roles.

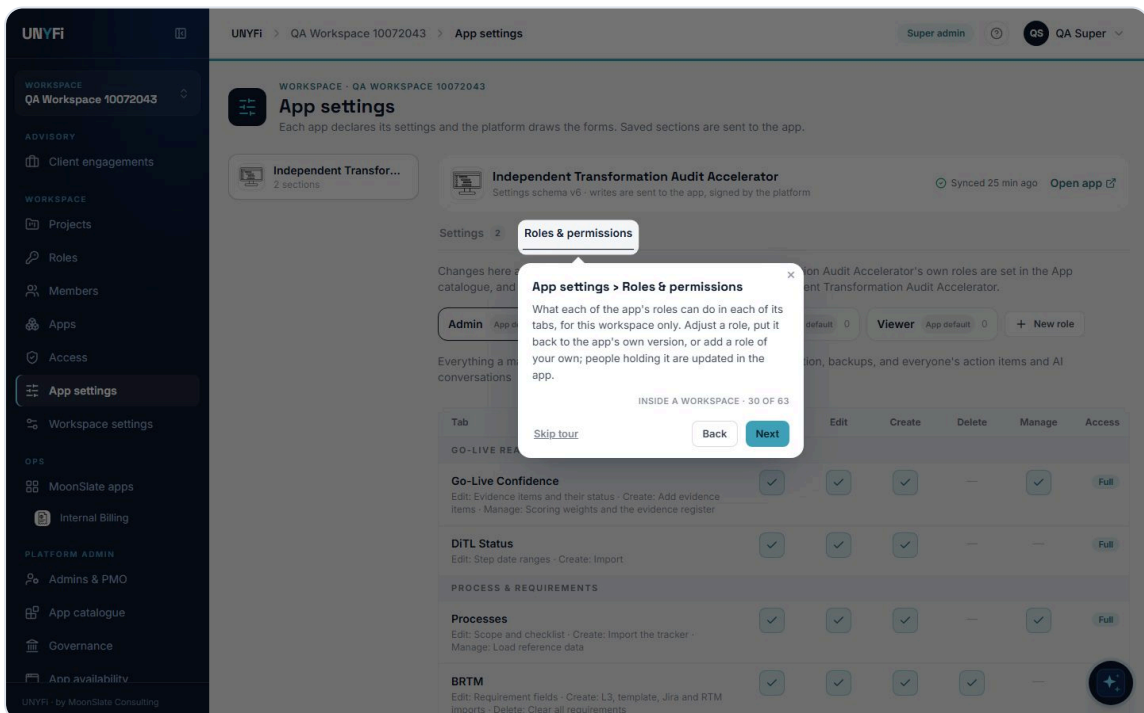

29 App settings > Settings

The app's settings for this client, section by section. Saving a section sends it to the app, and each one shows when it was last saved and by whom.

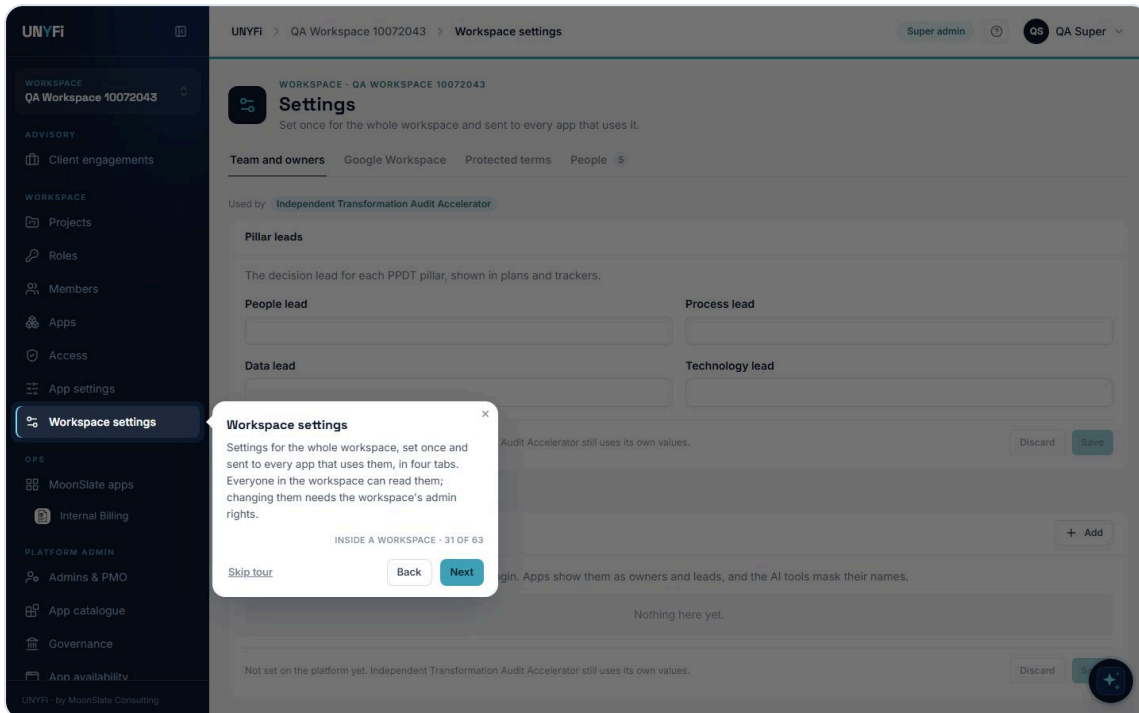

30 App settings > Roles & permissions

What each of the app's roles can do in each of its tabs, for this workspace only. Adjust a role, put it back to the app's own version, or add a role of your own; people holding it are updated in the app.

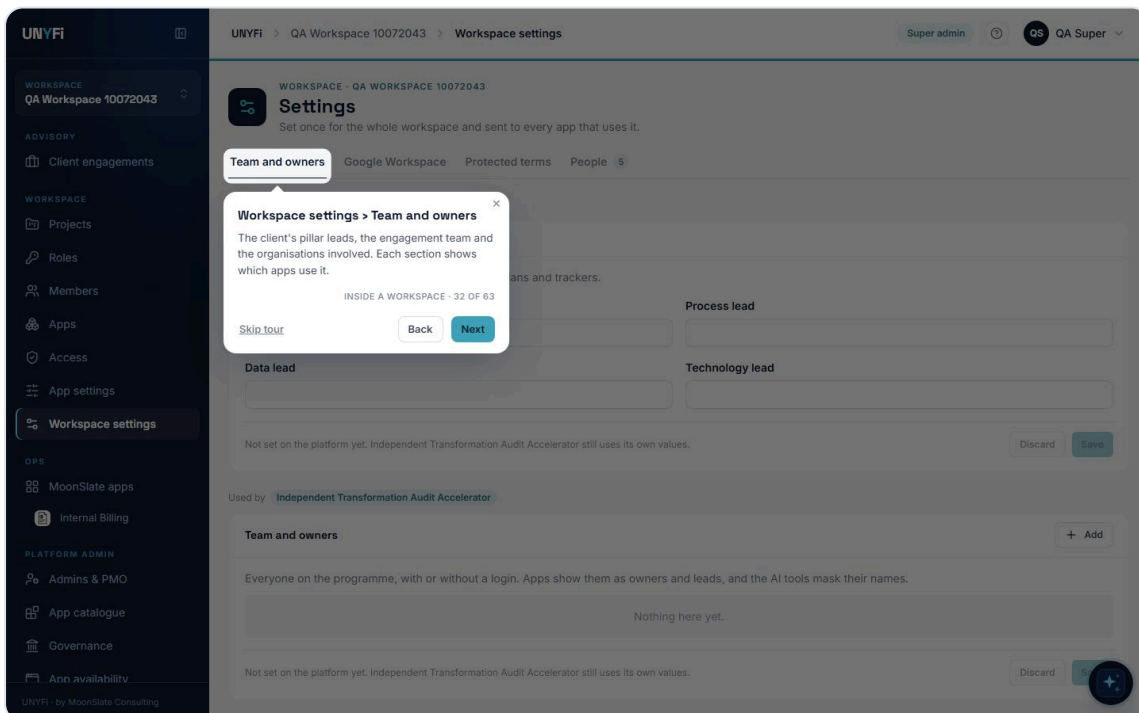

31 Workspace settings

Settings for the whole workspace, set once and sent to every app that uses them, in four tabs. Everyone in the workspace can read them; changing them needs the workspace's admin rights.

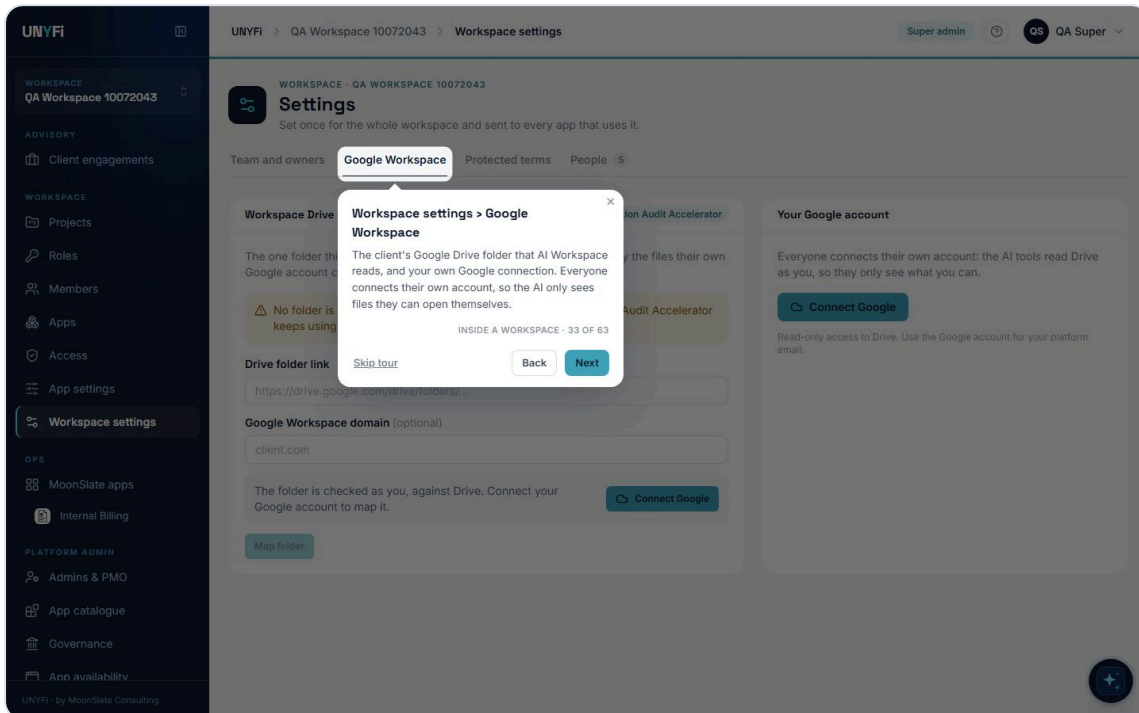

32 Workspace settings > Team and owners

The client's pillar leads, the engagement team and the organisations involved. Each section shows which apps use it.

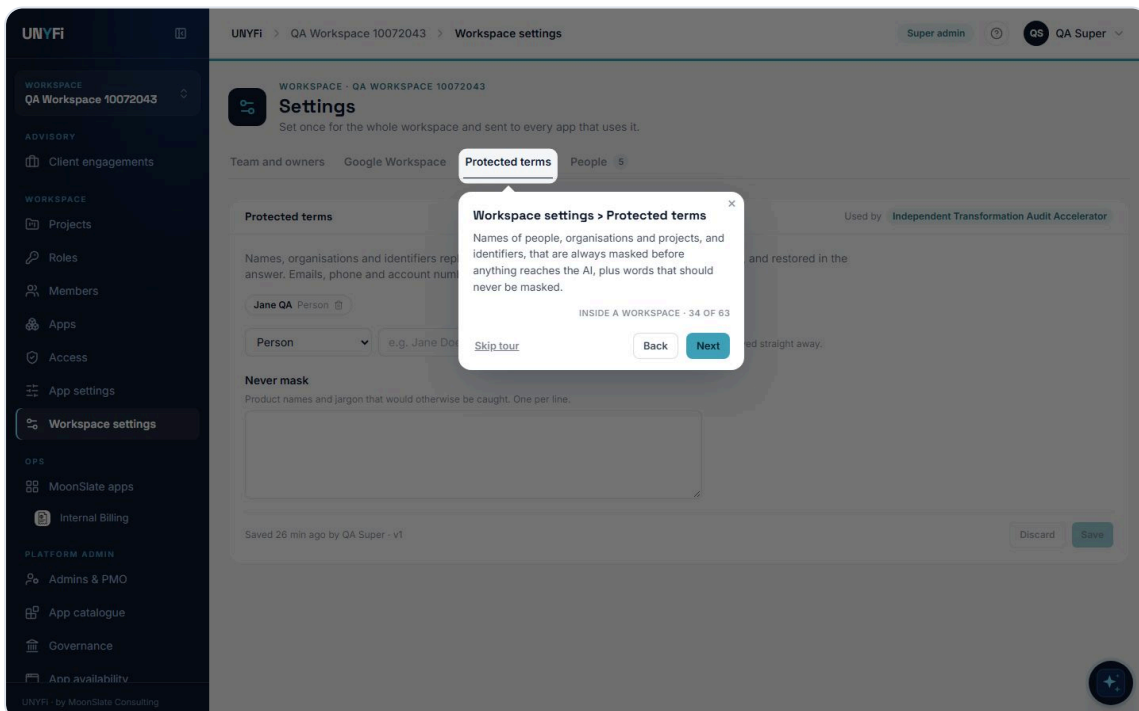

33 Workspace settings > Google Workspace

The client's Google Drive folder that AI Workspace reads, and your own Google connection. Everyone connects their own account, so the AI only sees files they can open themselves.

34 Workspace settings > Protected terms

Names of people, organisations and projects, and identifiers, that are always masked before anything reaches the AI, plus words that should never be masked.

35 Workspace settings > People

Everyone in the workspace and their workspace role. Who can use which app is managed on Access.

The screenshot displays the UNYFi Admin console interface. The left sidebar contains a navigation menu with sections: WORKSPACE (QA Workspace 10072043), ADVISORY (Client engagements), WORKSPACE (Projects, Roles, Members, Apps, Access, App settings), and Workspace settings (highlighted). Below this are OPS (MoonSlate apps, Internal Billing) and PLATFORM ADMIN (Admins & PMO, App catalogue, Governance, App availability). The main content area shows the 'Settings' page for the workspace, with tabs for Team and owners, Google Workspace, Protected terms, and People (selected). A tooltip titled 'Workspace settings > People' is overlaid, stating: 'Everyone in the workspace and their workspace role. Who can use which app is managed on Access.' The background shows a list of workspace members with columns for Person, Role, and Workspace role.

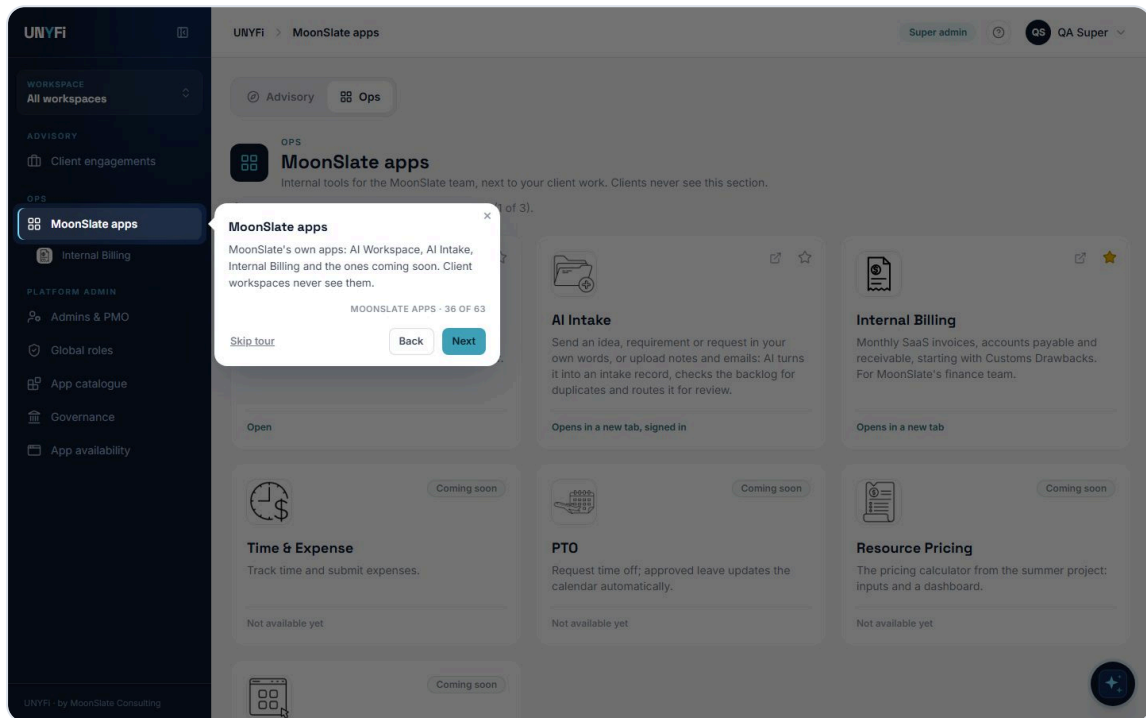

Person	Role	Workspace role
CN Casey Nguyen casey.nguyen@example.com		QA/Admin
QA QA Admin qa-admin@example.com		QA/Admin
QC QA Client qa-client@example.com		Reviewer
QP QA Pmo qa-pmo@example.com		PMO/Admin
R Rchaudhuri - qa-invitee@example.com		Approver

MoonSlate apps

MoonSlate's own tools. Client workspaces never see them.

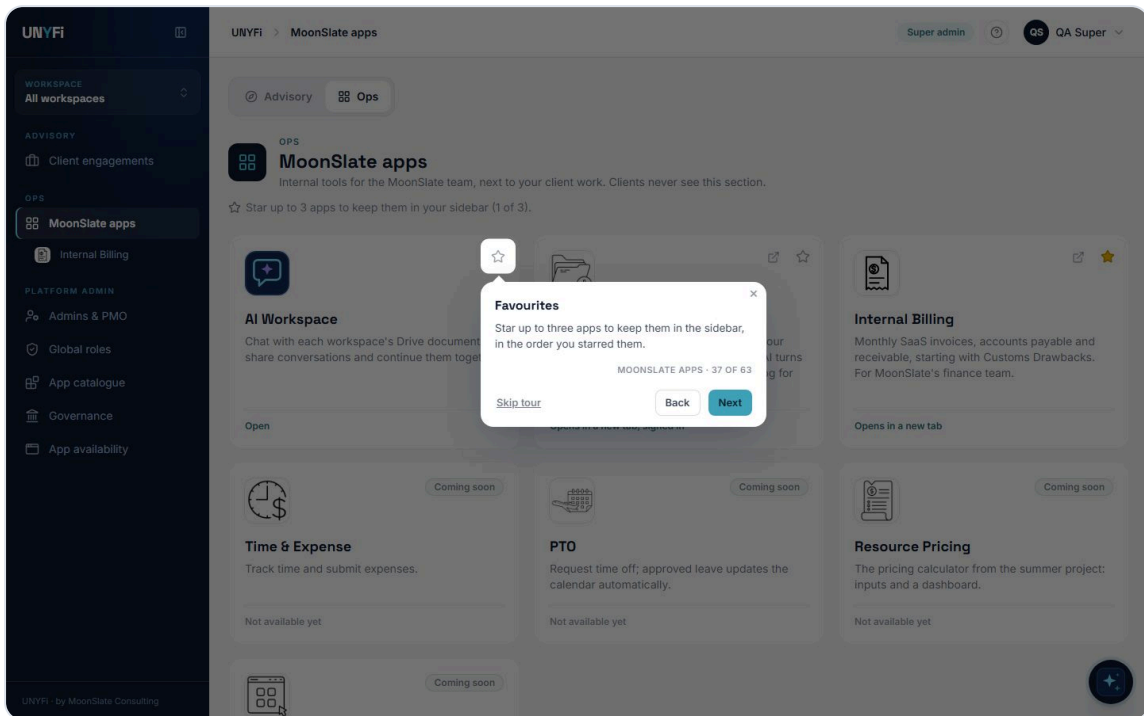

36 MoonSlate apps

MoonSlate's own apps: AI Workspace, AI Intake, Internal Billing and the ones coming soon. Client workspaces never see them.

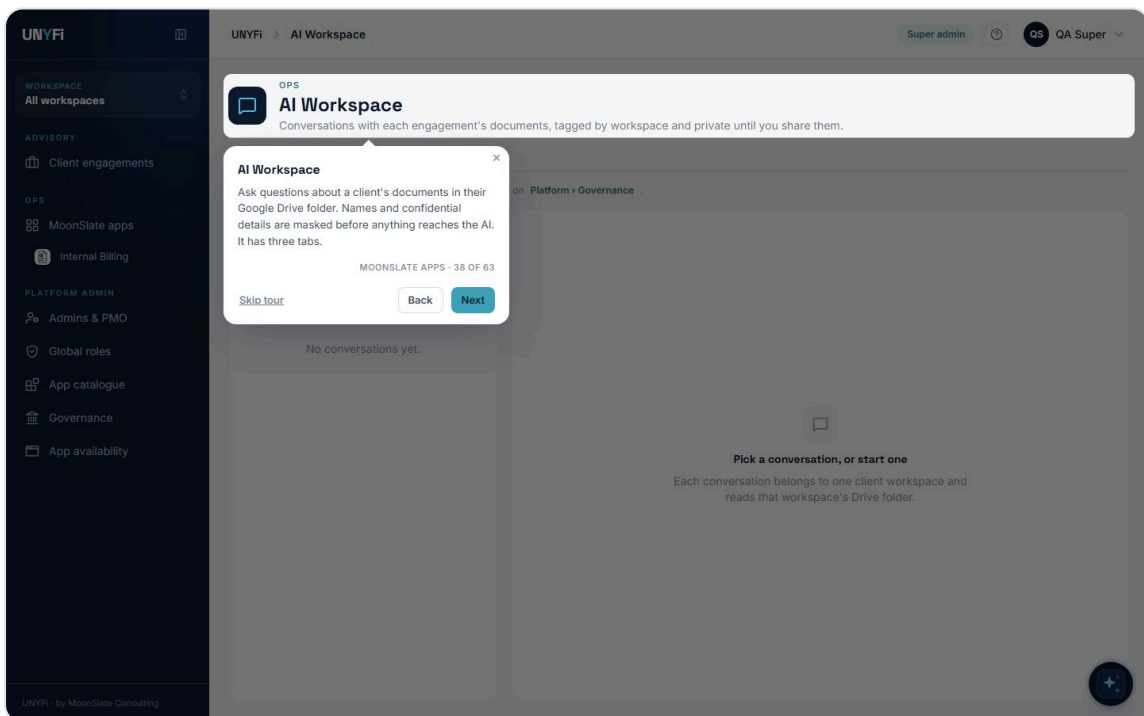

37 Favourites

Star up to three apps to keep them in the sidebar, in the order you starred them.

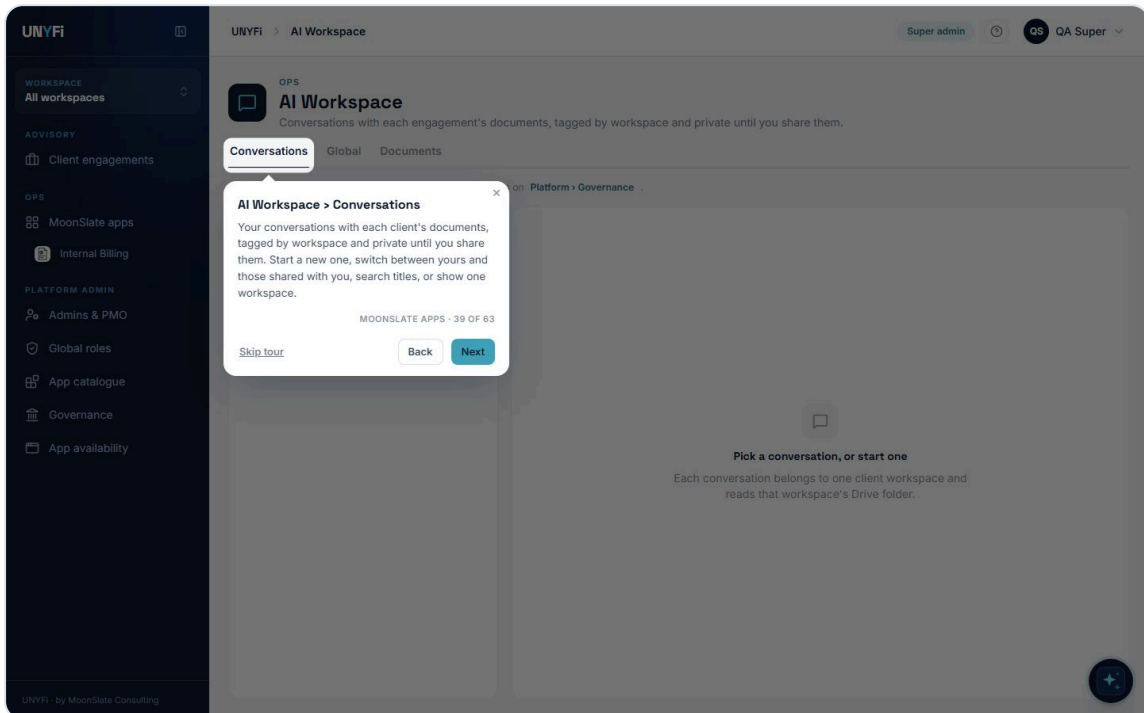

38 AI Workspace

Ask questions about a client's documents in their Google Drive folder. Names and confidential details are masked before anything reaches the AI. It has three tabs.

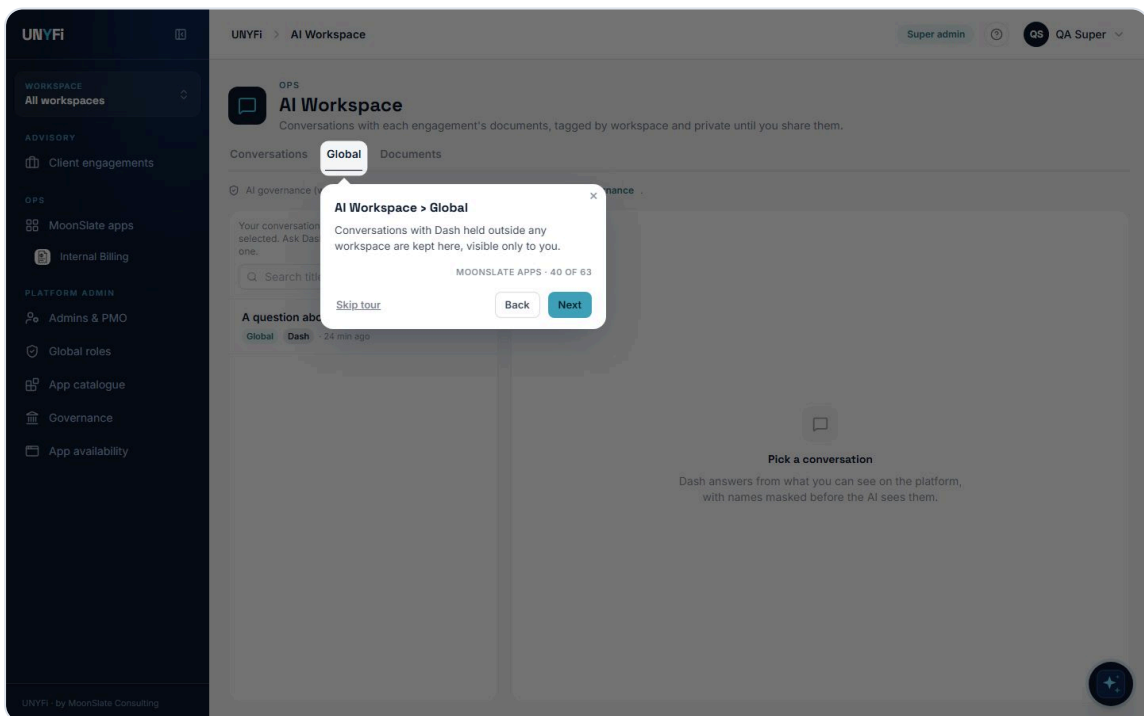

39 AI Workspace > Conversations

Your conversations with each client's documents, tagged by workspace and private until you share them. Start a new one, switch between yours and those shared with you, search titles, or show one workspace.

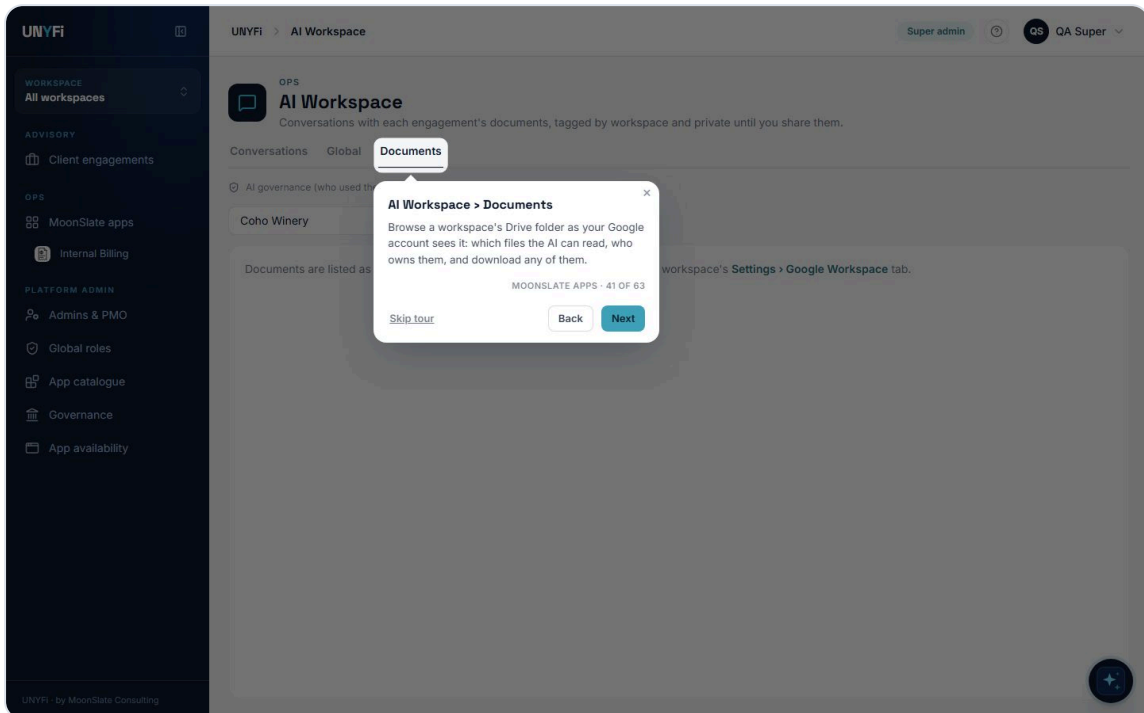

40 AI Workspace > Global

Conversations with Dash held outside any workspace are kept here, visible only to you.

41 AI Workspace > Documents

Browse a workspace's Drive folder as your Google account sees it: which files the AI can read, who owns them, and download any of them.

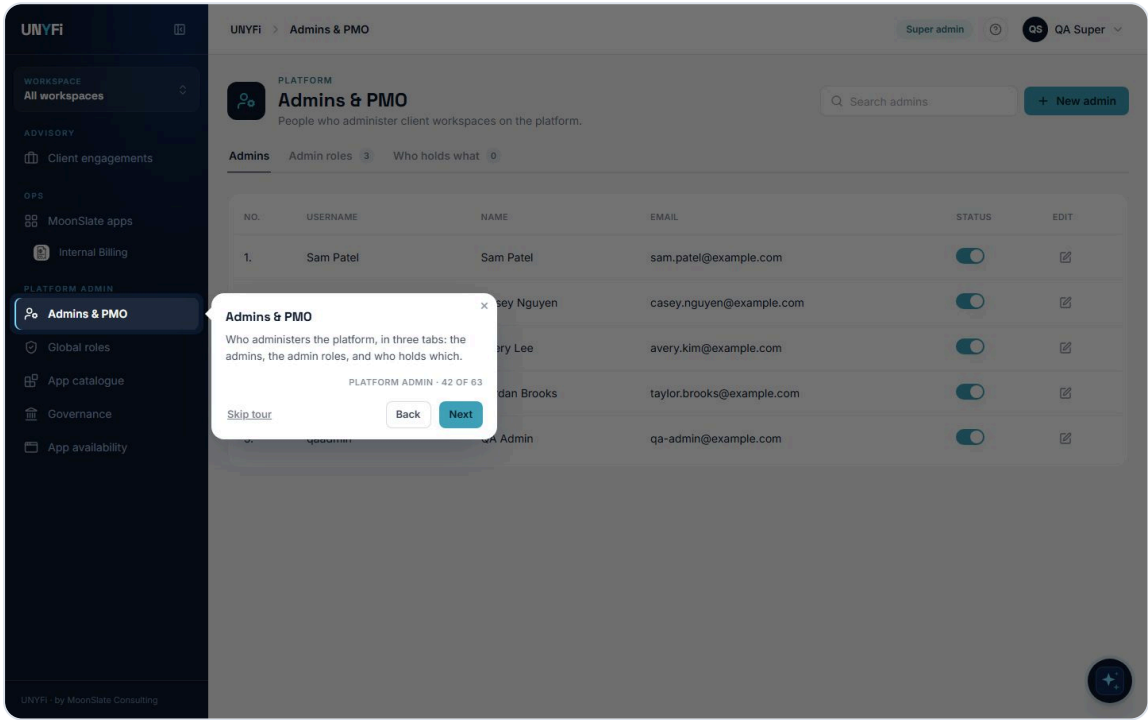

Platform admin

Tools that apply across every client: who administers the platform, the standard roles, the app catalogue and which client has which app.

42

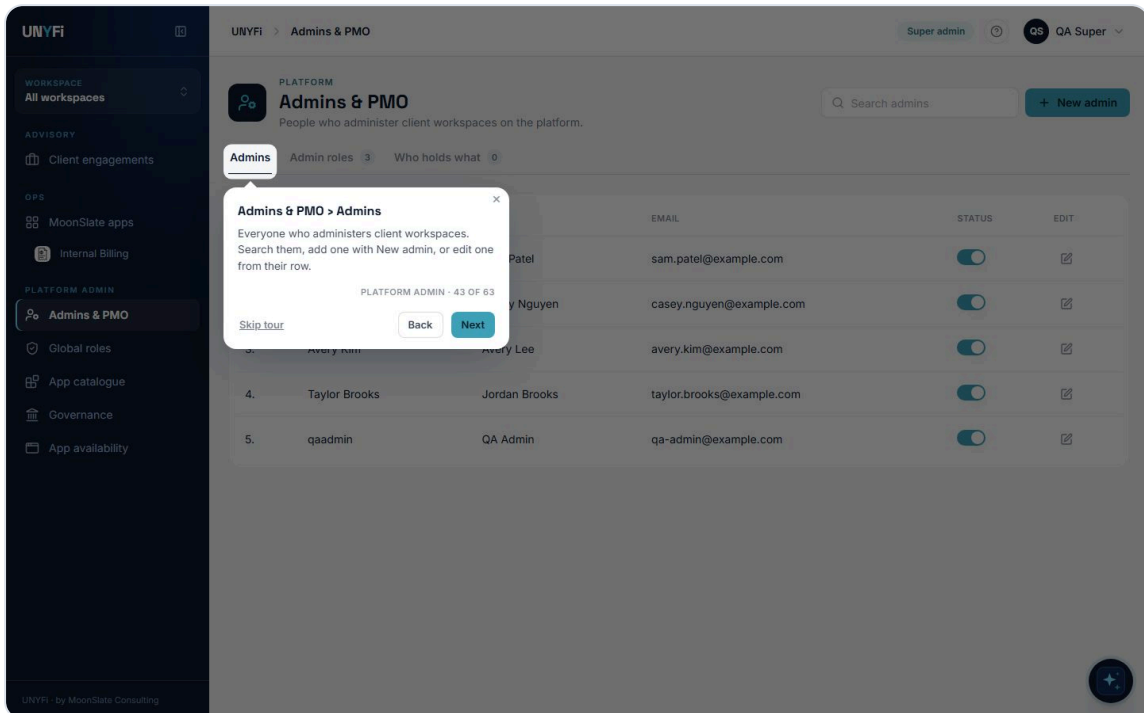

Admins & PMO

Who administers the platform, in three tabs: the admins, the admin roles, and who holds which.

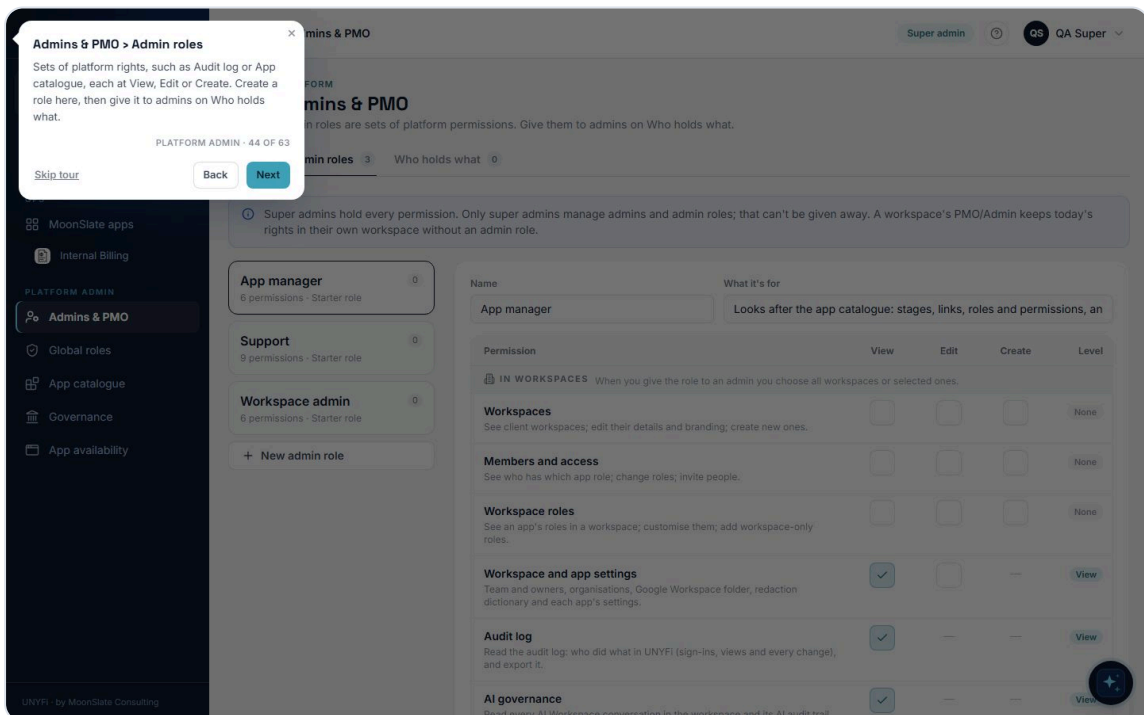

43 Admins & PMO > Admins

Everyone who administers client workspaces. Search them, add one with New admin, or edit one from their row.

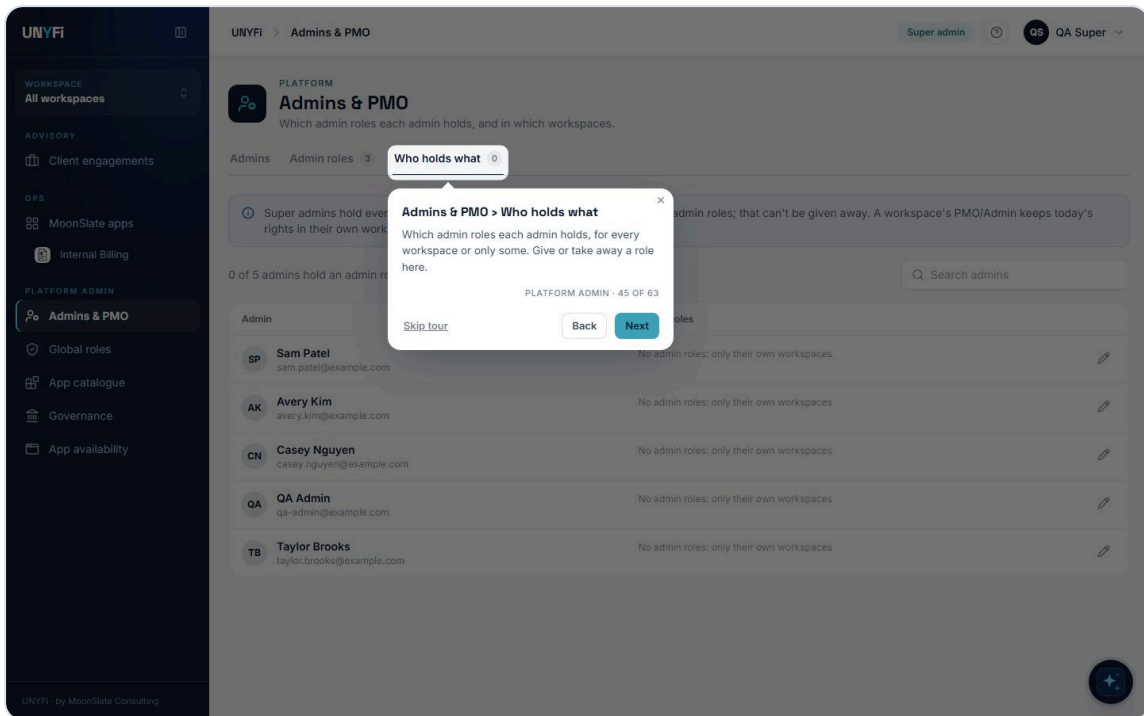

44 Admins & PMO > Admin roles

Sets of platform rights, such as Audit log or App catalogue, each at View, Edit or Create. Create a role here, then give it to admins on Who holds what.

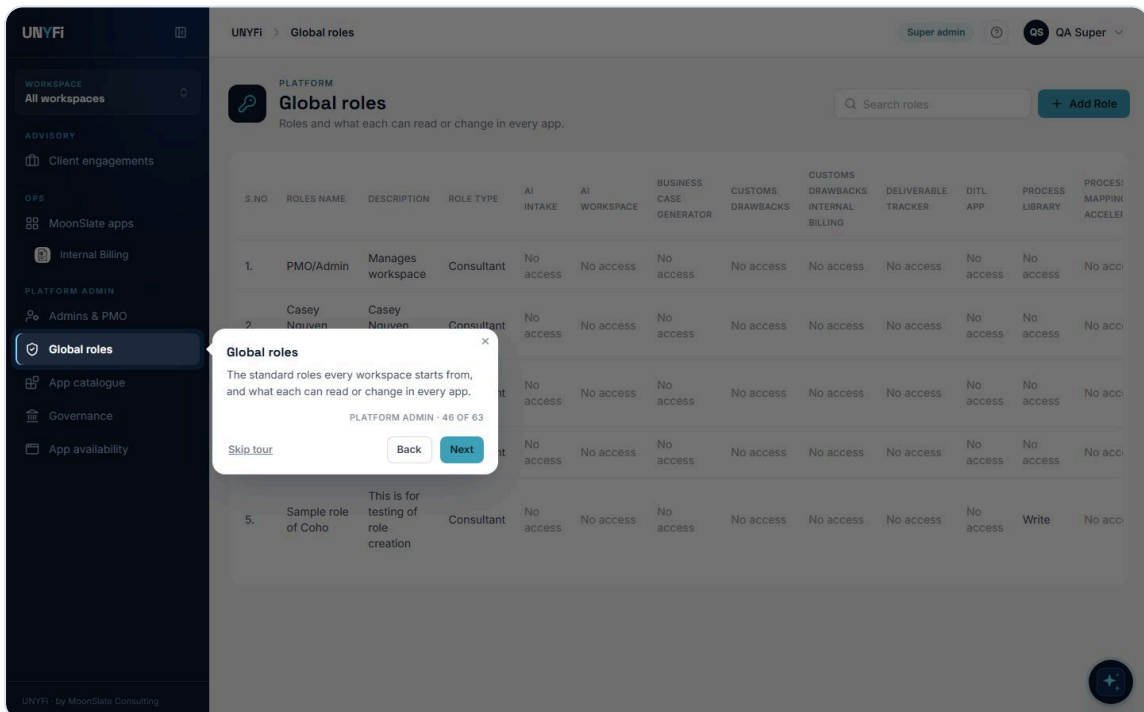

45 Admins & PMO > Who holds what

Which admin roles each admin holds, for every workspace or only some. Give or take away a role here.

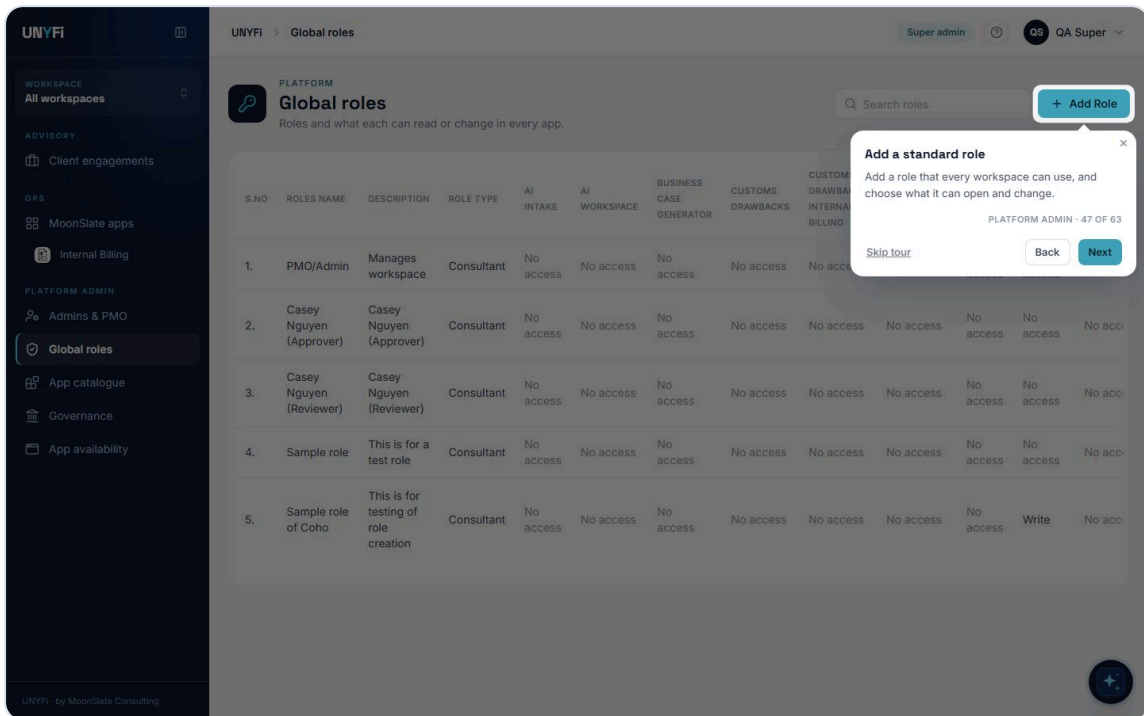

46 Global roles

The standard roles every workspace starts from, and what each can read or change in every app.

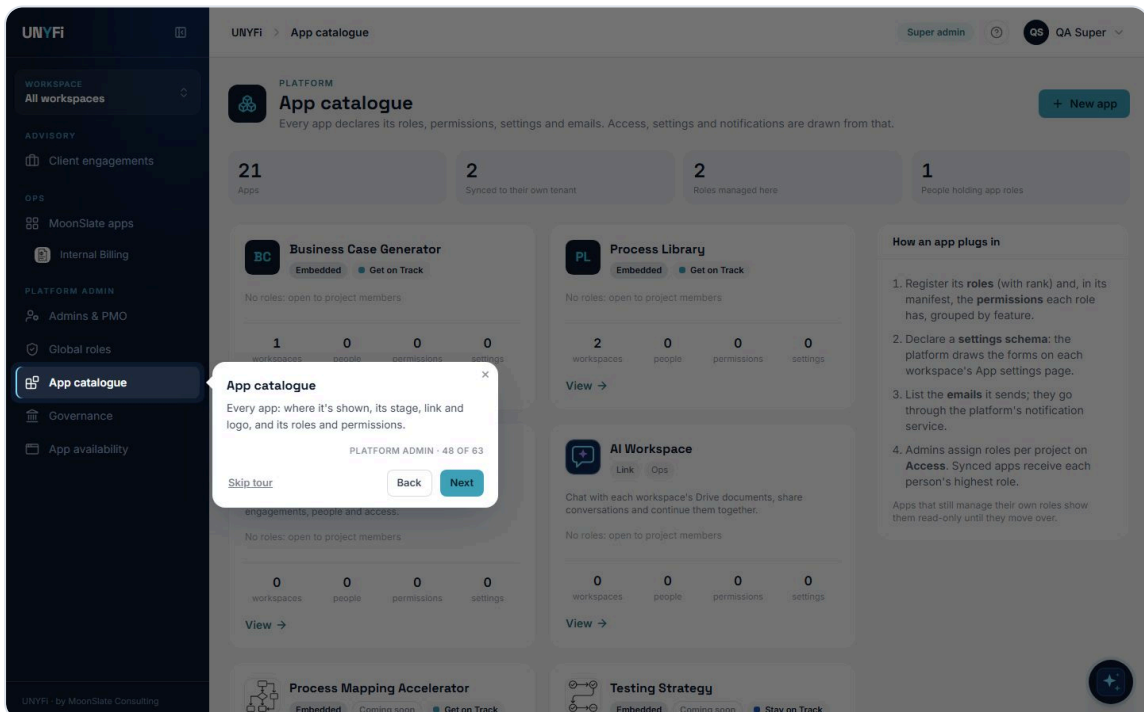

47 Add a standard role

Add a role that every workspace can use, and choose what it can open and change.

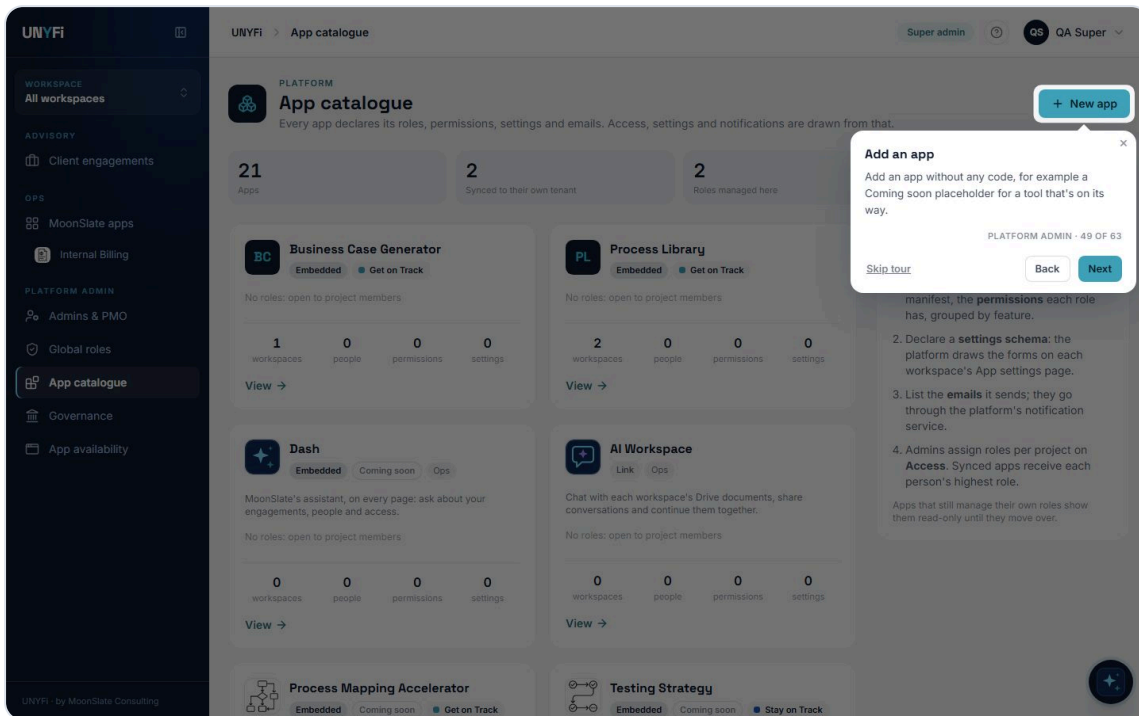

48 App catalogue

Every app: where it's shown, its stage, link and logo, and its roles and permissions.

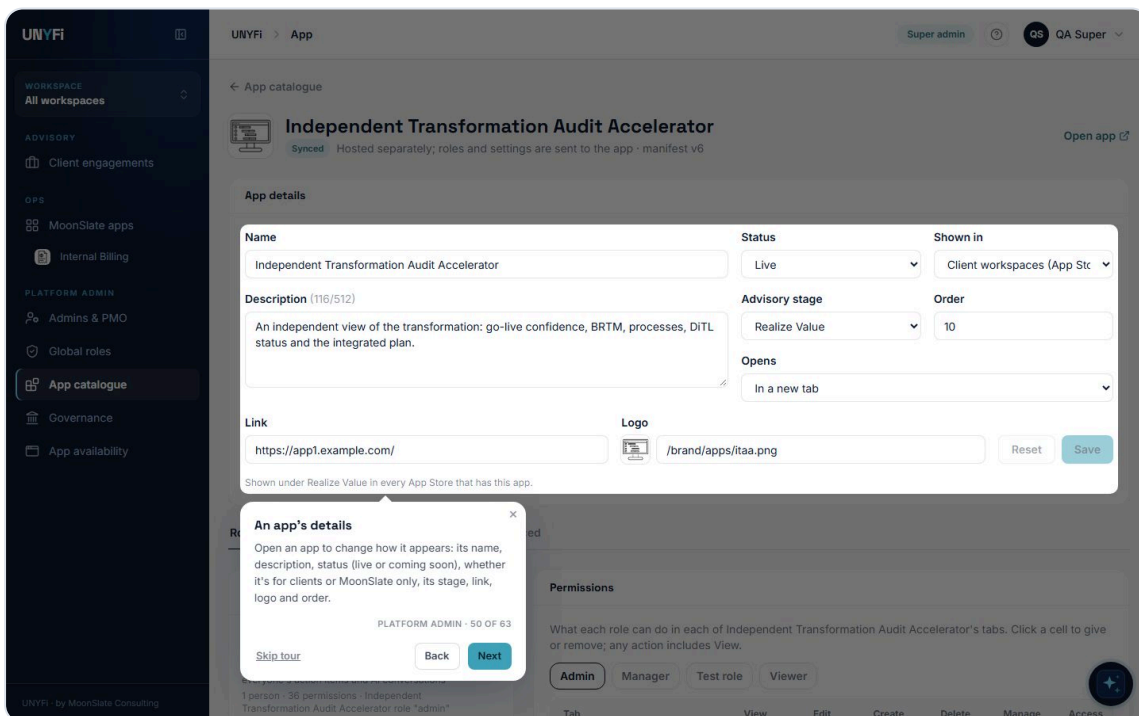

49 Add an app

Add an app without any code, for example a Coming soon placeholder for a tool that's on its way.

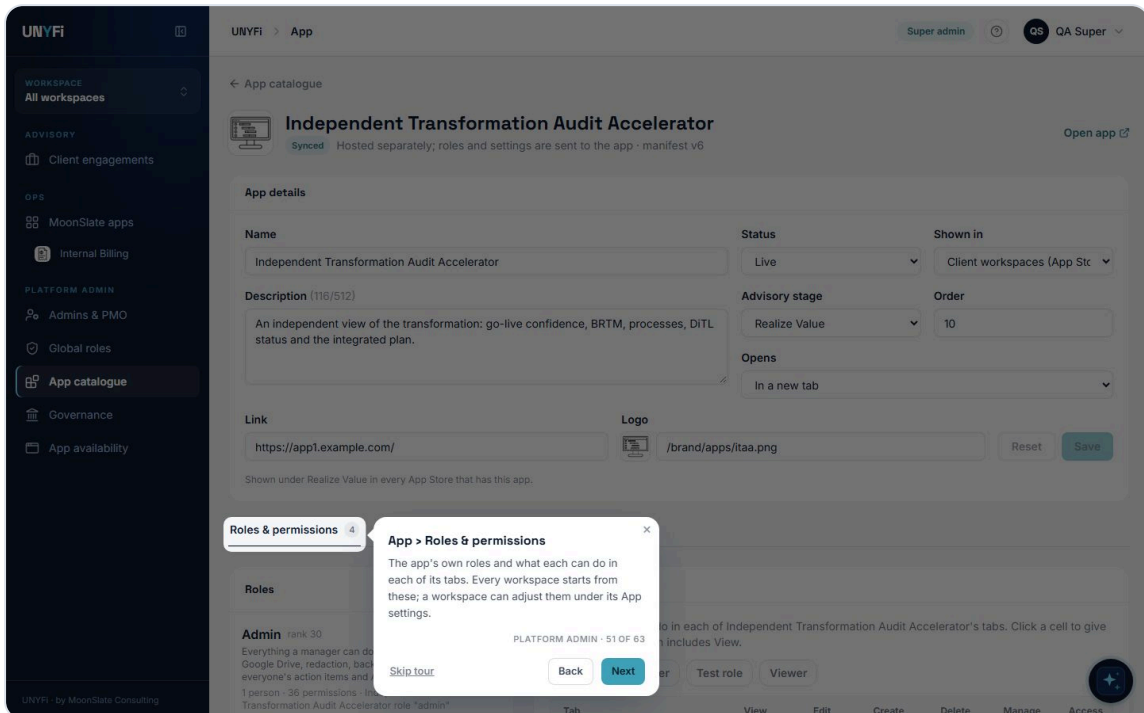

50 An app's details

Open an app to change how it appears: its name, description, status (live or coming soon), whether it's for clients or MoonSlate only, its stage, link, logo and order.

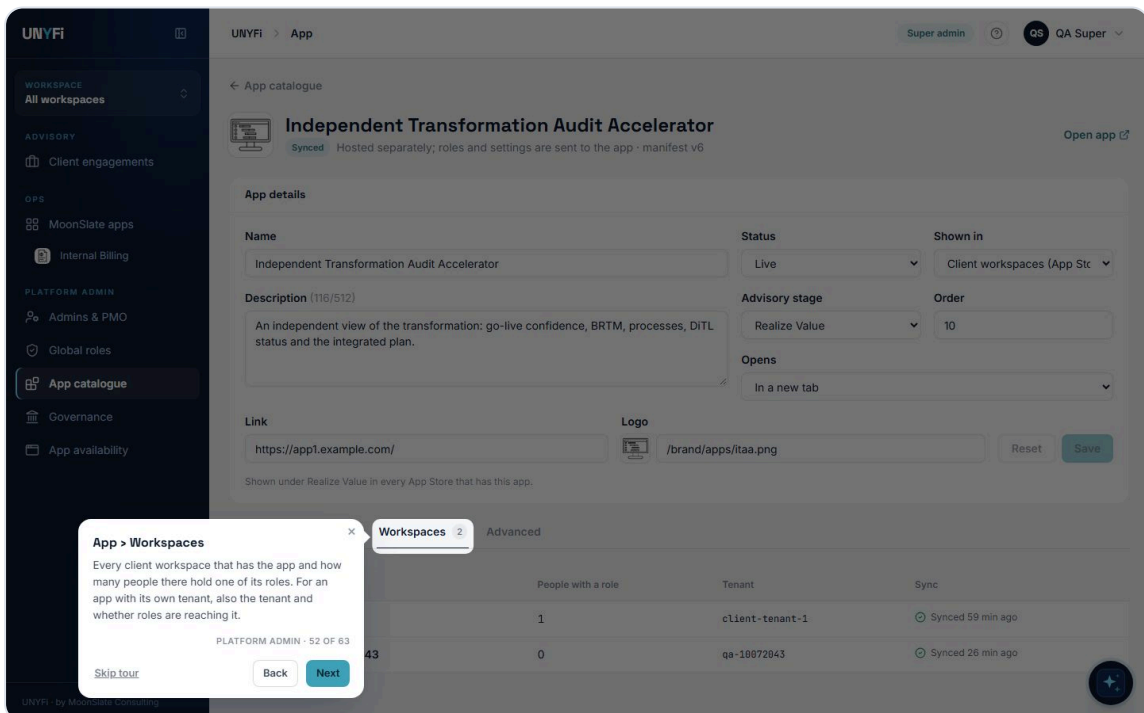

51 App > Roles & permissions

The app's own roles and what each can do in each of its tabs. Every workspace starts from these; a workspace can adjust them under its App settings.

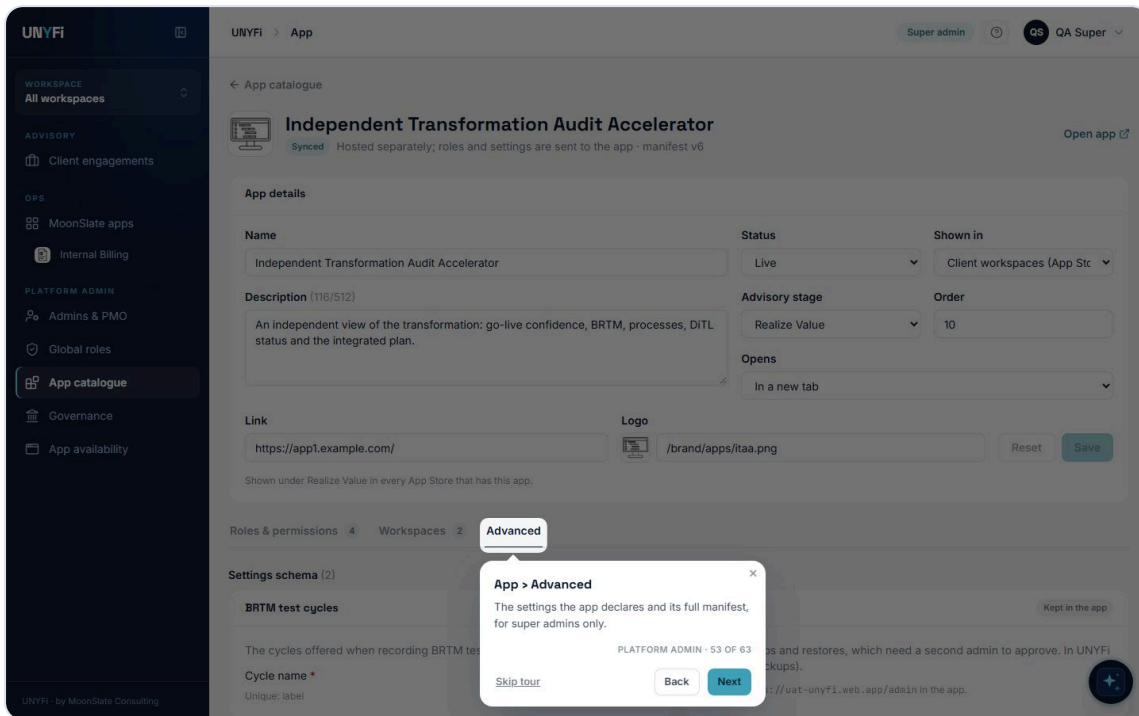

52 App > Workspaces

Every client workspace that has the app and how many people there hold one of its roles. For an app with its own tenant, also the tenant and whether roles are reaching it.

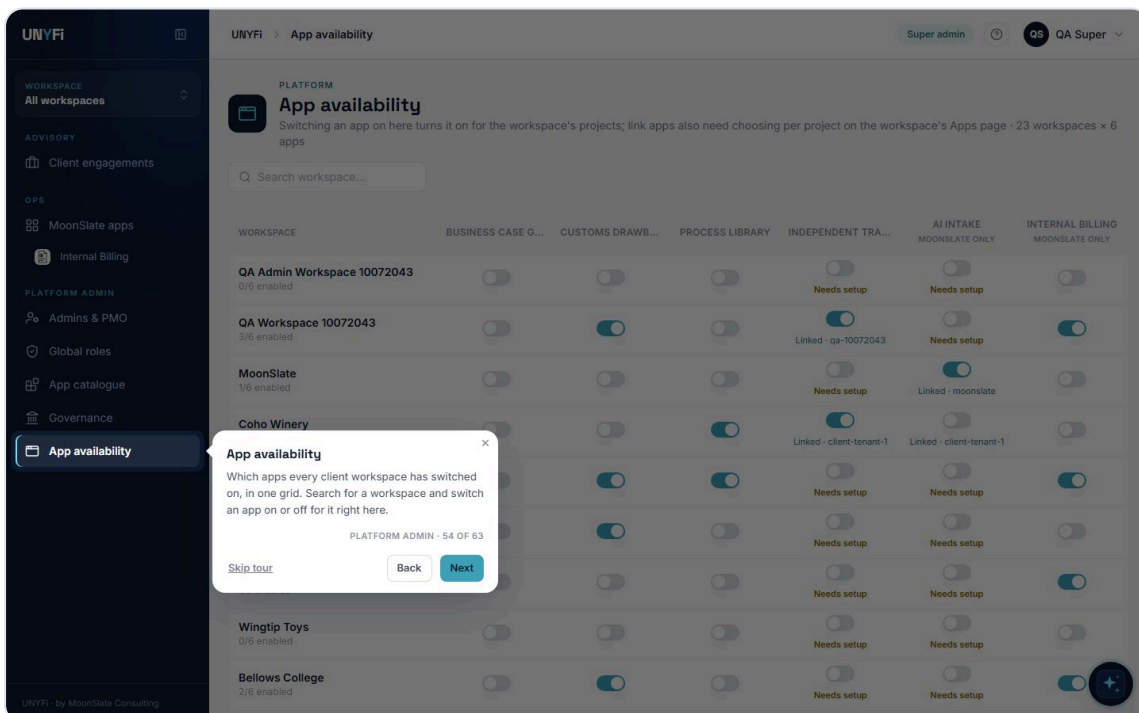

53 App > Advanced

The settings the app declares and its full manifest, for super admins only.

54 App availability

Which apps every client workspace has switched on, in one grid. Search for a workspace and switch an app on or off for it right here.

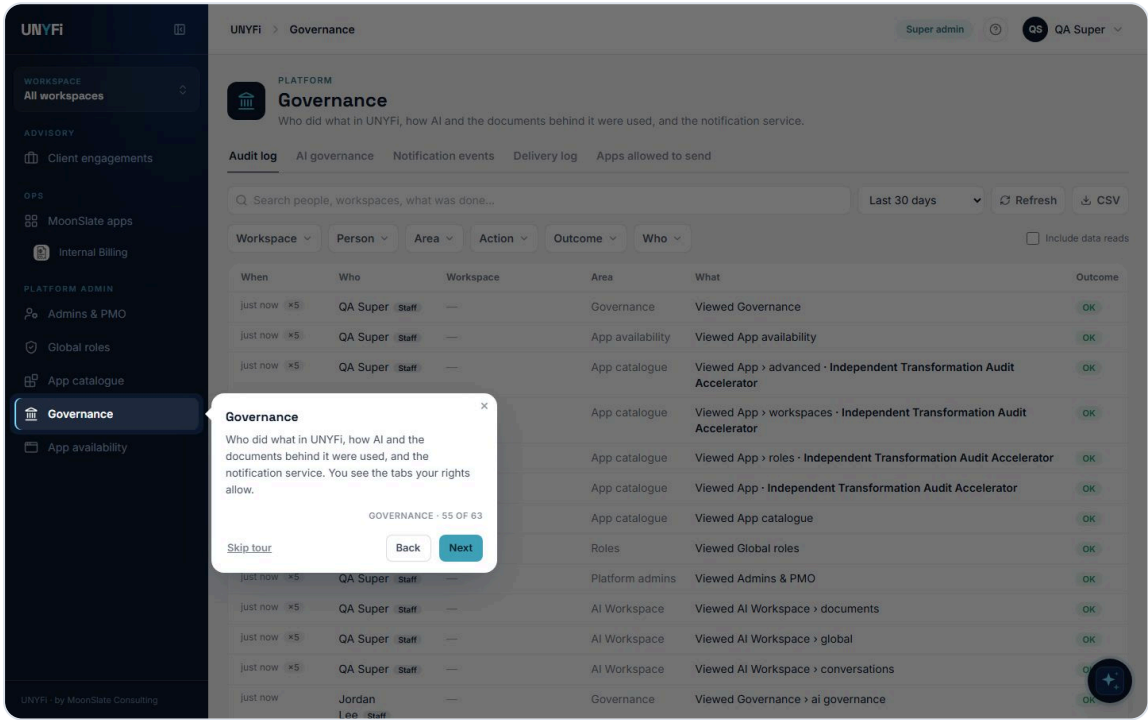

Governance

Who did what in UNYFi, how AI and the documents behind it were used, and the notification service.

55

Governance

Who did what in UNYFi, how AI and the documents behind it were used, and the notification service. You see the tabs your rights allow.

56 Governance > Audit log

Every sign-in, page opened and change in UNYFi, recorded by the server, newest first. The same person opening the same thing again within ten minutes counts on one row.

UNYFi > Governance

Super admin | QA Super

62 Governance > Apps allowed to send

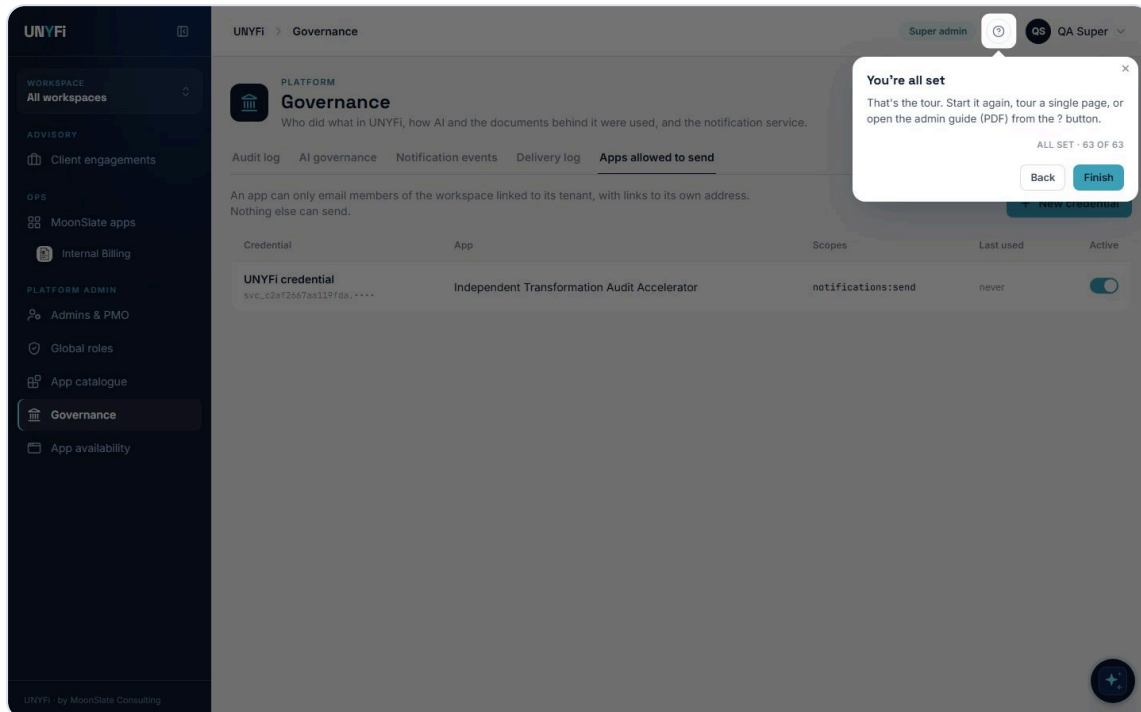

The credentials that let an app send email through UNYFi. An app can only email members of its own client's workspace; switch a credential off to stop it.

All set

63 You're all set

That's the tour. Start it again, tour a single page, or open the admin guide (PDF) from the ? button.

Quick how-tos

Add a client's PMO/Admin

1. Open the client's workspace, then **Members** › **Add User**.
2. Enter their work email and name, choose the project and the role **PMO/Admin**, then **Add user**.
3. They're emailed their sign-in details. As PMO/Admin they can sign in to UNYFi and look after this workspace only: its members, apps and access.

Switch an app on for a client

1. In the workspace, open **Apps** and turn the app's switch on.
2. An app with its own tenant (for example ITAA) asks you to set the tenant up first. Apps marked **Coming soon** can't be switched on yet.

Give people access to an app on a project

1. In the workspace, open **Access** › **Invite people**.
2. Enter one or more email addresses, choose the project and a role in each app, then **Invite**.
3. People with an account get access straight away; everyone else gets a one-time link. Unaccepted invitations are under **Pending invites**.

Keep your favourite MoonSlate apps in the sidebar

1. Open **MoonSlate apps** and click the star on up to three apps.

Find out who did something

1. Open **Governance** › **Audit log**.
2. Search, or filter by person, workspace, area, action or outcome, and pick the period. Turn on **Include data reads** to see every piece of data a page loaded.
3. Click a row for its details. **CSV** exports exactly what the filters show. The filters are in the page's address, so you can bookmark or share a filtered view.

Check how AI and a client's documents were used

1. Open **Governance** › **AI governance** and choose the workspace and period.
2. UNYFi AI rows show who asked the AI, about which documents, and which kinds of data were masked. Drive rows show who opened, edited, moved or shared the documents in Google Drive.
3. Drive rows are read with your own Google account: if asked, choose **Connect Google**.

Bookmark a project

1. Open the project and bookmark the page. If you're signed out when you open the bookmark, signing in brings you straight back to it.

Add an app that's on its way

1. Open **App catalogue** › **New app**. Give it a name, where it's shown, its stage and the status **Coming soon**.
2. It appears greyed on every project page until it's live. Open it to change its details, roles and permissions.

If something isn't working

What you see	What to do
A client can't sign in to UNYFi	Only a workspace's PMO/Admin signs in to the platform. Reviewers and Approvers sign in through their app's own link, for example Customs Drawbacks'.
You were signed out	After an hour without activity you're signed out for safety. Sign in again and you return to the page you were on.
An app's switch won't turn on	It's Coming soon, or it needs its tenant set up first (Workspace > Apps asks for it).
AI governance says "Connect Google"	Drive activity is read with your own Google account. Connect it, and make sure your account can open the workspace's Drive folder.
People show as "Drive user" in AI governance	UNYFi names people from your own Google Workspace directory. Anyone outside it (a client's or a personal Google account) stays "Drive user". If colleagues do too, choose Reconnect Google and allow UNYFi to see your directory.
"The Drive Activity API is not enabled"	An administrator needs to enable the Drive Activity API on the Google Cloud project UNYFi's Google sign-in uses.
"No Google Drive folder is mapped"	Map the client's folder in Workspace settings > Google Workspace.
You'd like to see the tour again	Click ? at the top right: Take the tour, or Tour this page.

Everything you do in UNYFi is recorded in the audit log: sign-ins, pages opened, data read and every change. Passwords and the content of AI questions and answers are never recorded.
